Manuscript Type:	Research Paper
Keywords:	Goffman, London Insurance Market, digital or virtual working, Work identity, COVID-19, knowledge workers

# 'Who Am I? What Am I Doing?' The Impact of the COVID-19 Pandemic on Work Identities

## 1.0 Introduction

England underwent three lockdowns and several periods of social distancing restrictions between March 2020 and June 2021 to minimise the spread of the COVID-19 outbreak (Hurley and Walker, 2021; Institute for Government, 2022). These measures produced complex challenges that reverberated across various domains (Caligiuri *et al.*, 2020; Carillo *et al.*, 2021; Shoss *et al.*, 2021). Careers were disrupted (Akkermans *et al.*, 2020) when all organisational employees—also denoted as knowledge workers in this paper—were mandated to shift to remote working for an extended duration, irrespective of their preferences and norms (Waizenegger *et al.*, 2020). According to the events system theory developed by Morgeson *et al.* (2015), large-scale unforeseen events have the potential to unsettle and undermine established structures and norms. The COVID-19 pandemic aligns with this concept because it had far-reaching consequences at both micro and macro levels. Knowledge workers accustomed to conventional office environments faced abrupt changes in their established routines, which prompted a fundamental review of their work identities. Concurrently, the pandemic reshaped work landscapes through the widespread adoption of remote work, signifying a noteworthy societal shift in the realm of knowledge-based work (Hennekam *et al.*, 2021; Singh *et al.*, 2022).

Work identity refers to an individual's self-perception of their professional self and encompasses a fusion of organisational, occupational, functional and other identities (Walsh

1  
2  
3  
4 and Gordon, 2008). This composite identity influences their corresponding behaviours in the  
5 workplace. Identity scholars have elucidated that individuals shape, alter, uphold or fortify their  
6 work identities within their social structures, driven by the pursuit of better financial rewards  
7 and elevated status (Alvesson and Willmott, 2022; Ibarra and Barbulescu, 2010; Walsh and  
8 Gordon, 2008; Wrzesniewski, 2002). This dynamic process of identity work assumes particular  
9 importance when organisational members encounter ambivalence and conflicts arising from  
10 various scenarios, such as when they have doubts about their competencies (Horn, 2017), when  
11 their organisations undergo major corporate transformations (Corley and Gioia, 2004), when  
12 they are members of stigmatised institutions (Eury *et al.*, 2018), when the imposed changes  
13 change the meanings of their occupations (Kyratsis *et al.*, 2017) and when clashes stem from  
14 the intersection of their multiple social identities (Caza *et al.*, 2018; Clair *et al.*, 2005; Dahm *et*  
15 *al.*, 2019; Ramarajan, 2014). These concerns become more pronounced when triggered by  
16 macro-level events (Hennekam *et al.*, 2021; Leigh and Melwani, 2019; Petriglieri, 2011). The  
17 previous literature has shown that such large-scale and unforeseen events disconnect the past  
18 from the future, prompting organisational employees to re-evaluate the work identities they  
19 had previously embraced or aspired to achieve (Chatrakul Na Ayudhya *et al.*, 2019; Daskalaki  
20 and Simosi, 2017; Donnelly & Proctor-Thomson, 2015; Elsbach and Kramer, 1996;  
21 Wrzesniewski, 2002). Being forced to relinquish cherished identities can damage one's selfhood  
22 and evoke negative emotions (Conroy and O'Leary-Kelly, 2014). According to a model  
23 developed by Williams and Murphy (2022), individuals typically need 12 to 18 months to make  
24 adequate sense of career-altering events before they can respond appropriately.

44 A review of prior research on remote working, also known as virtual working, provided insights  
45 for the present study. Notably, even before the pandemic restrictions, organisations had  
46 already begun moving towards virtual or remote working to address workforce demands  
47 (Jackson *et al.*, 2006) and economic pressures (Gao and Sai, 2020). Parallel to these transitions,  
48 another significant shift emerged with the rise of gig work, which altered knowledge workers'  
49 participation in the workforce (Ashford *et al.*, 2018; Petriglieri *et al.*, 2019; Watson *et al.*, 2021).  
50 Consequently, there is some value in considering the extant literature on the work identities of  
51  
52  
53

1  
2  
3  
4 knowledge workers engaged in both virtual and gig working practices (Hodder, 2020; Petriglieri  
5 *et al.*, 2019).

6  
7  
8  
9 Academic research documenting these trends presents diverse definitions of virtual and gig  
10 workers (see Caza *et al.*, 2022 and Charalampous *et al.*, 2019). In the knowledge industry,  
11 virtual workers are salaried employees who are often geographically separated from their  
12 employers' offices and rely on technology to collaborate with colleagues (Au and Marks, 2012;  
13 Makarius and Larson, 2017; Soga *et al.*, 2022). Gig workers, on the other hand, operate more  
14 independently, maintaining both physical and relational disconnection from their collaborators  
15 and clients (Ashford *et al.*, 2018; Petriglieri *et al.*, 2019). Scholars have examined the benefits of  
16 virtual and gig work for individuals and organisations (refer to Ashford *et al.*, 2018; Bailey and  
17 Kurland, 2002; Charalampous, 2019; Petriglieri *et al.*, 2019; Watson *et al.*, 2021). However,  
18 academic perspectives also highlight the distinctive challenges that can threaten and  
19 undermine the work identities of virtual and gig workers. These challenges include feelings of  
20 estrangement from organisations and co-workers, invisibility, status threats, interpersonal  
21 conflicts and the absence of established routines and designated workspaces (Bailey and  
22 Kurland, 2002; Barsness *et al.*, 2005; Petriglieri *et al.*, 2019; Walsh and Gordon, 2008;  
23 Wiesenfeld *et al.*, 1999). When cultural differences exist among workers in geographically  
24 dispersed teams, stereotypes are often employed to characterise each other (Au and Marks,  
25 2012). Similar to their counterparts working in conventional work settings, remote and gig  
26 knowledge workers rely on regular formal and informal interactions to solidify their work  
27 identities and cultivate a shared identity with others (Alvesson, 2001; Makarius and Larson,  
28 2017; Methot *et al.*, 2018; Sutherland *et al.*, 2020; Wiesenfeld *et al.*, 1999). Moreover, because  
29 of the gendered dynamics of family life, women who work remotely face unique challenges in  
30 balancing their work and parenting roles, leading to difficulties in reconciling their identities in  
31 both domains (Wilson and Greenhill, 2004). To offset these barriers, virtual and gig workers are  
32 driven to bolster their confidence and enhance how others perceive their abilities and  
33 accomplishments (Bailey and Kurland, 2002; Barsness *et al.*, 2005; Brocklehurst, 2001).

Recreating work-related routines and artefacts at home, carving out distinct spaces to decouple

1  
2  
3  
4 work from non-work activities and creating new narratives about their professional selves are  
5 some strategies employed by virtual and gig workers to project their work identities to others  
6 (Brocklehurst, 2001; Petriglieri *et al.*, 2019; Thatcher and Zhu, 2006).  
7  
8  
9

10  
11 Collectively, the aforementioned studies provide a good foundation for understanding the  
12 relationship between circumstances and work identities. While it is possible to draw similarities  
13 from these studies to theorise the pandemic's impact on knowledge workers' daily work,  
14 COVID-19 presented distinct challenges, thereby necessitating the development of new  
15 theoretical insights. The lockdowns and social distancing restrictions, initially expected to be  
16 short-term, created a period underpinned by volatility and enforced confinement. The  
17 emerging literature on COVID-19 confirms that the environmental duress due to the pandemic  
18 produced adverse emotions in employees as they tried to make sense of a world where familiar  
19 structures had swiftly disintegrated (Barclay *et al.*, 2022). Knowledge workers faced two  
20 formidable challenges that threatened their work identities: the complete dissolution of  
21 borders between personal and work domains, and the depletion of crucial relational assets.  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32

33 As observed in the literature on remote and gig work, work and other social identities were  
34 moving towards integration (Ramarajan and Reid, 2013). However, the onset of the pandemic  
35 and subsequent restrictions rapidly dismantled the boundaries between work and personal life,  
36 causing a pronounced deterioration of work-life balance (Hughes and Donnelly, 2022). Parental  
37 and work identities dissolved into each other (Bowyer *et al.*, 2022) as people's homes morphed  
38 into both workplaces and educational settings (Bellmann and Hübler, 2020; Boncori, 2020;  
39 Waizenegger *et al.*, 2020). Overall, the existing evidence suggests that pandemic measures  
40 amplified the gendered dynamics of family roles, resulting in drastic spillover effects on women  
41 (Cataldi and Tomatis, 2022). Women had to manage work demands while also looking after  
42 their dependents more than men (Boncori, 2020; Clark *et al.*, 2021; Johnson, 2022; Mihalache  
43 and Mihalache, 2022; Smith, 2022). Consequently, the pandemic may have had a negative  
44 impact on women's career progress (Bowyer *et al.*, 2022; Soga *et al.*, 2022).

1  
2  
3  
4  
5  
6 Additionally, organisational employees experienced a loss of emotional connection and  
7 commitment to their co-workers and employers (Adisa *et al.*, 2023; Becker *et al.*, 2022;  
8 Mihalache and Mihalache, 2022). Before the implementation of pandemic-related restrictions,  
9 the traditional work environment served as the primary arena for employees to develop and  
10 perform their work identities (Petriglieri and Petriglieri, 2010). Being physically separated from  
11 organisations diminished employees' collective identity with their institutions (Wang *et al.*,  
12 2020). The discontinuation of informal, face-to-face interactions hindered career development  
13 (Carillo *et al.*, 2021), causing further isolation and loneliness, as individuals were unable to  
14 observe and mimic behaviours that were considered valuable at work. Seeking help on virtual  
15 platforms was difficult. Many found the sole dependence on technology to interact with others  
16 to be challenging (Hughes and Donnelly, 2022; Hafermalz and Riemer, 2021).

23  
24  
25  
26  
27

28 Since work plays a pivotal role in people's lives (Wrzesniewski, 2002) and events serve as  
29 significant contextual factors (Johns, 2006), the impact of enforced confinement on knowledge  
30 workers warrants further investigation (Akkermans *et al.*, 2020; Caligiuri *et al.*, 2020; Carnevale  
31 and Hatak, 2020; Waizenegger *et al.*, 2020). The manner in which individuals experience their  
32 everyday work and work environment is related to their work identities (Bartel *et al.*, 2012;  
33 Bimrose *et al.*, 2019). The present study examined the perception of work identities among  
34 employees in the London Insurance Market during a period marked by turbulence and isolation.  
35 To address this enquiry, this research drew on Goffman's institutional, dramaturgical and  
36 stigma theories. This study makes three major contributions to the existing literature in three  
37 major ways. First, it expands the growing body of research examining the impact of COVID-19  
38 on work by foregrounding employees' perspectives (Collings *et al.*, 2021a and 2021b). The  
39 extant literature does not fully capture the dynamics between individuals' work identities and  
40 the broader context of institutions and macro-level events (Brown, 2015), a gap that this study  
41 seeks to bridge. Second, this study integrates insights from different research areas—identity  
42 threat, identity work, remote working and unplanned events at the macro-level—to illustrate

## 26 2.0 The research setting

27  
28

29 The London Insurance Market is located in the City of London and deals with complex and  
30 specialty risks for large international businesses (Insurance Information Institute). The largest  
31 centre for insurance in the world, the London Insurance Market is more than 330 years old,  
32 making it an older institution than the Bank of England. Its diverse ecosystem comprises  
33 insurers, reinsurers, brokers and other associated bodies (Barrett, 1999; Barrett and Walsham,  
34 1999). It underwrites around USD 110 billion in the global insurance business and has a 47,000-  
35 strong workforce (Horton *et al.*, 2020). Employees are broadly divided into two main groups:  
36 front-office roles, such as underwriting, broking or claims, and back-office roles, such as  
37 finance, legal and risk management. Collectively, the industry insures and reinsures against  
38 major industrial risks from marine and aviation to cyber, energy and climate change. It is an  
39 industry that lends itself to be classed as 'knowledge-intensive' (Alvesson 2001) playing a  
40 critical role in the way companies manage uncertainties, plan activities and allocate resources.  
41 Despite its economic and social influence in the modern world, this industry has been largely  
42 neglected by scholars in the field of employee studies.  
43

55  
56  
57  
58  
59  
60

1  
2  
3  
4 Trading activities in the London Insurance Market have always been underpinned by intense  
5 face-to-face interactions among underwriters, brokers and claims specialists (Barrett, 1999;  
6 Barrett and Walsham, 1999; Heracleous and Barrett, 2001; Smet *et al.*, 2015). This is because  
7 the London Insurance Market operates on a subscription model wherein multiple insurers join  
8 forces to share policy risks. This dynamic requires close collaboration and trust between all  
9 parties, a characteristic that is commonly observed in knowledge-intensive industries (Alvesson,  
10 2001; Methot *et al.*, 2018).  
11  
12  
13  
14  
15  
16  
17

18 Heracleous and Barrett (2001), in their longitudinal study on the industry's transition from  
19 'paper slip to electronic risk placement' (page 763), found that there was significant opposition  
20 to this move despite support from the senior leaders. Employees in trading roles perceived the  
21 shift to remote electronic trading as a threat to their work identities and specialist knowledge,  
22 which had traditionally been developed and nurtured through personal relations and physical  
23 proximity (Barrett, 1999; Barrett and Walsham, 1999; Heracleous and Barrett, 2001). The  
24 prevailing institutional logic states that complex risks can only be adequately understood and  
25 priced through a series of face-to-face negotiations between representatives of different  
26 companies. Therefore, any deviation from this institutional practice is met by resistance  
27 (Barrett, 1999; Barrett and Walsham, 1999; Heracleous and Barrett, 2001). This is consistent  
28 with other studies which emphasise that individuals who are deeply rooted in institutional  
29 norms tend to reject changes that contradict these established principles (Toubiana and  
30 Zietsma, 2017). In this context, the London Insurance Market is an appropriate site for  
31 investigating the effects of pandemic-induced work practices on the individuals employed  
32 therein.

### 50 3.0 Theoretical perspectives

51  
52 Considering the above-mentioned environment, COVID-19 restrictions were particularly salient  
53 in the industry in which interactions gave meaning to the roles that actors played and the  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 identities they constructed. In this setting, Goffman's institutional, dramaturgical and stigma  
5 theories are relevant to the way participants understood their work identities during this  
6 period. This study draws from three of his seminal works: *Asylums* (1961), *Presentation of Self*  
7 (1959) and *Stigma* (1963).  
8  
9  
10

11  
12  
13 Goffman introduced the concept of 'total institutions' (1961) as a framework to describe  
14 environments such as prisons and psychiatric hospitals that encompass every aspect of an  
15 individual's life. Life in total institutions entails prolonged seclusion from the society. In such  
16 confined settings, the designated areas for sleeping, working and eating lose their distinct  
17 boundaries and merge into one another. It is more difficult to conceal private activities from  
18 others and discreditable information may become openly accessible. Upon entering a total  
19 institution, members forfeit their various past identities and erase the different roles they  
20 played in society. Instead, they have to adopt the norms of the new social order. Thus,  
21 institutional identity assumes a definitive role in shaping its members' identities. Maintaining or  
22 distinguishing one's status in such an enclosed space can be challenging. Although Goffman did  
23 not envision enforced remote work arrangements when he conceived total institutions, the  
24 pandemic's restrictions can be understood as exhibiting totalising tendencies within a novel  
25 institutional context.  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38

39 Goffman's (1959) dramaturgical theory enhances our understanding of social interactions by  
40 challenging the notion of fixed identity. It presented the concepts of 'frontstage' and  
41 'backstage' settings, illustrating the ways in which people segment their audience in everyday  
42 life and adapt their behaviours accordingly. Frontstage work performance is learned by  
43 observing cultural habits and prevalent norms. Behaviours and performances in frontstage  
44 workplaces become impression management strategies. In turn, the audience responds either  
45 by accepting or rejecting the actor's identity. Identity formation hinges on interactions between  
46 performers, audiences and contextual dynamics. In backstage settings, performers can  
47 reasonably assume a lower risk of accessibility among frontstage audience members.  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 Consequently, in backstage settings, individuals are not bound by the norms, formalities or  
5 expectations associated with frontstage settings. Nevertheless, backstage settings provide  
6 opportunities to rehearse or experiment with behaviours to construct one's frontstage identity,  
7  
8 **emphasising the interplay between frontstage and backstage audience members.**  
9  
10

11  
12  
13 Goffman's *Stigma* (1963) **extended his theory of multiple identities** by classifying them into  
14 three dimensions: personal, social and ego. This study examines the domain of work identity,  
15 which falls within the scope of social identity. Goffman outlined three forms of stigma: stigmas  
16 related to bodily impairments, stigmas associated with deviant behaviours and stigmas from  
17 tribalism, which separate people based on their group affiliations. In the workplace,  
18 stigmatisation can have detrimental effects by devaluing individuals and collective groups.  
19 Goffman distinguished between two groups of stigmatised people: discreditable and  
20 discredited. Discreditable individuals are those whose stigmas are less apparent whereas  
21 discredited individuals are those whose stigmas are visible. Both groups actively engage in  
22 identity work to manage how others perceive them.  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32

33 By mobilising Goffman's concepts, the present study examined the impact of COVID-19  
34 disruptions to working patterns and violations of the social order on the work identities of  
35 knowledge workers in the London Insurance Market. Being mandated to work from home for  
36 an uncertain period forced organisational members to become captives of a total institution,  
37 triggering a transformative process known as the mortification of their former selves. As the  
38 traditional work setting moved from the frontstage to the backstage, individuals' homes no  
39 longer remained private and trusted backstage settings, but were exposed to a frontstage  
40 audience to survey and make judgements about the individual(s) living there. Simultaneously,  
41 the backstage settings offered by a traditional workplace vanished abruptly, with individuals  
42 losing the types of backstage interactions that had previously benefited their work identities.  
43 Therefore, employees had to negotiate and renegotiate their work identities to find some form  
44 of social order within this total institution, a situation that was unfamiliar to them. Only after  
45

1  
2  
3  
4 spending a significant period in this totalising context can individuals gradually acclimatise and  
5 shape new work identities that align with institutional expectations (Williams and Murphy,  
6 2022). Goffman's insights served as effective resources for examining identities in a shifting  
7 environment and for bridging the gap between daily work experiences in the microcosm and  
8 disruptive events in the macrocosm.  
9  
10  
11  
12

## 13 14 15 4.0 Methodology

16  
17 This study used data from an ongoing PhD research investigating the ways in which individuals  
18 comprehend, construct and conduct their careers in the London Insurance Market. Semi-  
19 structured interviews were conducted to collect data after obtaining ethical approval from the  
20 Research Ethics Committee of Brunel University London in 2020. A combination of purposive,  
21 convenience and snowball sampling were used to recruit participants (King and Horrocks, 2010;  
22 Miles and Huberman, 1994; Silverman, 2017; Yin, 2016). All participants were made aware of  
23 the voluntary nature of their involvement and the use of pseudonyms to maintain  
24 confidentiality.  
25  
26  
27  
28  
29  
30  
31  
32  
33

34 Table 1 presents the demographic characteristics of the 36 participants included in this study.  
35 **The goal was to incorporate the diversity among participants, including sex, age, employment**  
36 **tenure, ethnicity and occupation.** More than 60 percent of the participants in this study were  
37 female; whereas in 2019, approximately 45 percent of employees in the industry were female  
38 (Horton *et al.*, 2020). The distribution of participants across the different age groups in the  
39 sample was broadly representative of the 2019 workforce, except for the 40 to 49 age group  
40 (Horton *et al.*, 2020). On average, the participants had 9.91 years of experience in the industry.  
41 Concerning ethnicity, 41 percent of the participants identified as White, 30 percent as Black or  
42 Black African, 22 percent as Asian and 8 percent as mixed ethnicities. Unfortunately, at the time  
43 of writing, ethnicity data was not available for the London Insurance Market workforce to make  
44 a meaningful comparison with the study sample. Regarding job roles, over 40 percent of the

8  
9

10 **Table 1:** Participant characteristics

11  
12  
13 Interviews were conducted between September 2020 and February 2021, a period defined by  
14 the changing lockdown restrictions in England (Hurley and Walker, 2021; Institute for  
15 Government, 2021). In July 2020, the lockdown measures were eased; however, the  
16 government introduced stringent measures in September 2020. The country subsequently  
17 experienced a second and third lockdown in November 2020 and January 2021, respectively.  
18 At the time of their interviews, participants had not returned to their respective offices since  
19 March 2020 and were uncertain about when they might be able to do so.  
20  
21  
22  
23  
24  
25  
26  
27

28 The interviews lasted between 52 and 140 minutes and took place via a video or audio call. The  
29 author listened to the recorded interviews multiple times and transcribed them verbatim to  
30 understand the data (King and Brooks, 2016; Silverman, 2017; Yin, 2016). Furthermore, the  
31 author maintained a research diary to document observations immediately after each  
32 interview. A critical realist-constructivist paradigm underpins this study. This paradigm accepts  
33 that structures, such as the limitations posed by the pandemic, govern people's decisions and  
34 actions in their social world and that there are multiple realities during periods marked by  
35 changes and turmoil (King and Horrocks, 2010; Layder, 1993).  
36  
37  
38  
39  
40  
41  
42  
43

44 Thematic analysis was used to examine the data (Braun and Clarke, 2006 and 2013). The author  
45 reviewed the transcripts multiple times and referred to the field notes to determine recurring  
46 topics and their relationships, before clustering them into empirical themes and developing  
47 aggregate concepts. Alternating between the data and theory provided room for multiple  
48 revisions during the data analysis process. Table 2 illustrates the development of conceptual  
49 categories from the data and Table 3 presents the percentage of sample responses per topic.

Employee Relations

## 5.0 Findings

This study focused on how employees in the London Insurance Market experienced and navigated their work identities during a period of significant macro-level changes in work practices (Hughes and Donnelly, 2022). The findings were examined through Goffman's lens to determine how participants perceived the impact of this global phenomenon on their professional selves. The loss of partitions of everyday life impaired their work identities because participants were unable to compartmentalise their different identities for different audiences. Concurrently, physical separation from their institutions and co-workers posed the risk of disconnecting their past work identities from the present. The structures of the past were obliterated and careers loomed uncertain and unfamiliar.

### 5.1 Deterioration

The mandated work-from-home restrictions had a deteriorating impact on participants, with many experiencing stress, fatigue and other negative emotions as they struggled to adapt to work without boundaries. The pandemic's restrictions embodied Goffman's 'total institution' notion (1968) as participants viewed the context as severely limiting and dehumanising. The words 'depressed' and 'frustrated' were recurring emotional expressions in the interviews. Participants resented having to relinquish control over their schedules and identities as their personal and public selves merged in a confined space. They were forced into a position in which they had no prior knowledge of the identity they should adopt in a situation with totalising characteristics.

'I get bored of waking up in my bedroom, working in my bedroom, and then going to sleep in my bedroom. I feel like I am a hamster. I feel like a robot and I do not like it.' (Kate)

Particularly, female participants with children found it extremely difficult to reconcile their private and work identities. They were anxious about simultaneously protecting their work

1  
2  
3  
4 identity and fulfilling their family duties. When their power was tightly circumscribed, they  
5  
6 were forced to consider new ways of performing at work.

7  
8 'It is really challenging because my youngest needed home-schooling. I got to  
9  
10 a point when I had to tell everyone that I cannot have meetings in the  
11  
12 mornings because I have to home-school my child. But you cannot do it the  
13  
14 way they do in school. Children do not understand that they need to focus for  
15  
16 two hours to get their work done for the day. I then spend the afternoons  
17  
18 persuading and telling my child to complete schoolwork. It is really  
19  
20 challenging to do this while working. Once the homework is completed, I still  
21  
22 have to deal with all the email traffic that has been accumulating for the  
23  
24 whole day and make sure that I respond to people. You do not want people to  
25  
26 think that you are slacking. I have aged faster during this time.' (Olivia)

27  
28 Additionally, the intersection of sex and ethnicity has an additional influence on work identity.  
29  
30 According to Goffman (1963), members of stigmatised groups are socially accepted only when  
31  
32 they achieve an extraordinary level. Black female participants feared that existing inequities  
33  
34 could become more entrenched during periods of macro-level changes, imposing more  
35  
36 emotional labour on them to negotiate and manage their work identities online.

37  
38 'I worry specifically about Black women with children. If this continues for  
39  
40 longer, it will have a negative impact on their careers. The Black women I  
41  
42 know are concerned about balancing everything. Will they get passed up for  
43  
44 opportunities for promotion because they have less time at work and less  
45  
46 face time with people?' (Falcon)

47  
48  
49 In contrast, male participants either had a spouse at home who was not in the labour market or  
50  
51 had no children. However, the status of the male participants in this study did not reflect that  
52  
53 of other male employees in the industry. In one organisation, fathers with young children had  
54  
55 formally requested adjustments to their works schedules to cope with family duties. The

1  
2  
3  
4 difference in the approaches adopted by male and female parents could be seen through  
5 Goffman's stigma lens: men did not fear that their requests for flexible working practices would  
6 stigmatise their work identities.  
7

8  
9 'During the lockdowns, it was the guys in my company that found it hardest to  
10 cope. The mums are not asking for extra time off to work four or three days a  
11 week. It is the dads, really, although it is not surprising because some of them  
12 have wives who are key workers. The dads are all like "can I do two days a  
13 week until this pandemic finishes or until my wife's shift patterns change or  
14 until the school holidays?". The men told us that they cannot do both. But the  
15 expectation of the young mums is somehow do both.' (Fiona)  
16  
17  
18  
19  
20  
21  
22  
23

24 Frontstage work lives overshadowed backstage personal lives to such an extent that  
25 participants found it difficult to withdraw from the frontstage demands. While everyone  
26 experienced an increase in workload, participants had different motivations and circumstances  
27 that influenced their work practices. Remote-working technologies played a significant role in  
28 prolonging working hours. Paradoxically, working in a backstage setting created a culture of  
29 surveillance within organisations, resembling the characteristics found in total institutions  
30 (Goffman, 1961). People became aware of their colleagues' working patterns and of being  
31 observed by others. Participants felt obligated to use the new organisational structures to  
32 rationalise their experiences and develop their work identities (Goffman, 1961). During the  
33 interviews, they frequently compared their working hours with those before COVID-19,  
34 expressing frustration that the imposed restrictions were institutionalising long working hours  
35 and forcing them to adopt a new work identity, often at the expense of their well-being.  
36  
37  
38  
39  
40  
41  
42  
43  
44  
45

46 'Before the pandemic, the only people who would be logging on in the  
47 evening at home were senior people who were very busy and who had a lot  
48 of work to do. Now you are receiving many more emails and questions at  
49 different times of the day from different people at different levels. You feel  
50 obliged to respond to them until you go to bed. It has been relentless.' (Anuj)  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 The interviews revealed that employees in different age groups responded differently to their  
5 hectic schedules. Junior employees expressed that since they were not paid as much as their  
6 senior colleagues, they did not want to comply without a corresponding increase in financial  
7 rewards, one of the several adaptation strategies common in total institutions (Goffman, 1961).  
8 Simultaneously, they also acknowledged that if they strictly adhered to the designated working  
9 hours stipulated in their employment contracts, their peers and managers would see them as  
10 resisting the new norms and potentially devalue their work identities. They faced a challenging  
11 dilemma in balancing their sense of justice with the compulsion to meet the evolving workplace  
12 practices.  
13  
14  
15  
16  
17  
18  
19  
20  
21

22 Meanwhile, the managers in the sample experienced mounting pressures from their  
23 subordinates and leaders. Their new roles now encompassed not only driving organisational  
24 goals but also providing support akin to 'therapy' and 'counselling' for their team members,  
25 sometimes against their will. Balancing these responsibilities often resulted in additional strain  
26 and tension, which directly affected their ability to maintain and adapt to their work identities.  
27  
28  
29  
30

31 'I recently had a meeting with my peers across the market. Everyone was  
32 deadbeat. Work has been busy, but on top of that, we have to check on each  
33 person to make sure they are okay. Difficult to get our job done without  
34 working seven days a week. This may sound selfish, but as a manager, you  
35 have to look after yourself first.' (Eddie)  
36  
37  
38  
39  
40  
41  
42

43 However, not all participants experienced the external pressure to work long hours. Some  
44 individuals talked about the psychological need to start work earlier and end later because they  
45 were 'saving time on commuting'. This strategy demonstrated their commitment to their  
46 organisations. For others, being incarcerated from society allowed work to monopolise their  
47 everyday lives (Goffman, 1961). They immersed themselves in their work in the absence of  
48 other obligations and distractions.

1  
2  
3  
4 'Before the lockdown, you went out with your friends, went shopping and had  
5 a separation between work and life. When we went into lockdown,  
6 everything was closed, so naturally the only thing you could do was work.  
7  
8 Even on weekends, there is only so much television you can watch. There is  
9 still so much daytime left, and you are logging in and working again.' (Alex)  
10  
11  
12  
13  
14

### 15 16 5.1.1 Losing control over one's presentation of self

17  
18 The fusion of work and personal identities in a virtual work setting created a problematic  
19 context that limited participants' ability to control their performances (Goffman, 1959 and  
20 1961). Consequently, individuals no longer felt empowered to manage the portrayal of their  
21 work identities in this volatile environment. The loss of control over their self-presentation  
22 heightened their anxiety regarding potential stereotyping. In particular, the convergence of  
23 appearances and racial dynamics in online settings emerged as a significant hurdle for Black  
24 female participants. While others comfortably shifted to casual attire during work, Black  
25 women hesitated to adopt a more informal appearance in front of their work audience. They  
26 saw dressing as a way to present legitimacy and authority (Goffman, 1959 and 1963) and feared  
27 that being seen in casual clothes would invoke stereotypes and harm the work identities they  
28 had worked diligently to cultivate and present to others. They resisted changing their  
29 appearances because the relationship between physical appearance, social status and access to  
30 opportunities was important to this group.  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40

41  
42 'Wearing jeans or t-shirts, that would have a detrimental effect on me as a  
43 person. My uniform is a smart shirt and skirt, which looks professional. I have  
44 spent a lot of time and energy in creating myself. It is extremely difficult to  
45 unlearn this after 20 years of work.' (Rose)  
46  
47  
48  
49  
50

51  
52 Previously fully or partially hidden social identities were involuntarily disclosed to a scrutinising  
53 frontstage audience for judgement and potential rejection. The lack of appropriate workspace  
54 at home further compounded employees' difficulties during this period. During the interviews,  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 the video technology did not allow users to conceal their backgrounds. Approximately 75  
5 percent of the participants did not have a desk for work and had to convert different areas of  
6 their home as a makeshift workspace. For some, this created a sense of deprivation compared  
7 to their wealthier colleagues. They worried that this method of working would discredit their  
8 status among their co-workers. Those who had no choice but to use their beds as workstations  
9 feared and faced a significant denigration of their work identities.  
10  
11  
12  
13  
14

15 'I have had it so bad during the lockdown with the privilege that is all around  
16 me with my peers from private schools, massive houses and no worries about  
17 money. I have never been made to feel like an outsider before. I have never  
18 felt this strongly before that I do not belong to their middle class. Everyone  
19 has impressive offices on Zoom while my husband and I are taking turns to  
20 work on the bed and dining table.' (Rachel)  
21  
22  
23  
24  
25

26 One female participant was admonished by her Human Resources colleagues about working  
27 while 'staying in bed'. This was deemed as a stigma when attending meetings with colleagues.  
28 Despite her limited domestic setting, she accepted that being seen on bed created an  
29 unfavourable impression of her work identity. This participant's experience underscores the  
30 challenges faced by individuals when attempting to project suitable work images in  
31 unconventional settings.  
32  
33  
34  
35  
36  
37  
38

39 Not all indignities were visible or revealed in physical embodiments, however. Some  
40 participants, whose pre-existing medical conditions were exacerbated by the pandemic, voiced  
41 concerns that their deteriorating health could have an adverse effect on their immediate and  
42 future employment. Not every participant with a medical condition had openly disclosed their  
43 medical conditions to colleagues. Thus, they were worried about potential workplace  
44 marginalisation if their previously concealed health issues were to become apparent to  
45 colleagues (Goffman,1963).  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 Additionally, carefully crafted work identities were at risk of being undermined by a lack of  
5 understanding and support from household members. Participants who had difficult  
6 relationships at home faced an agonising dilemma concerning the potential disclosure of their  
7 private struggles to their frontstage work audience. Typically, such behaviours would have  
8 remained limited to their personal backstage home settings. However, the interview data also  
9 showed that not all employees in the industry shared this concern. For instance, managers in  
10 the sample were drawn into discussions with their subordinates about domestic situations that  
11 had become worsened by the COVID-19 restrictions. These different reactions highlighted the  
12 complex undercurrents faced by employees in managing their work identities at home, wherein  
13 some encountered additional challenges while others received support and understanding.  
14

17  
18  
19  
20  
21  
22  
23

## 24 *5.2 Disconnection*

25  
26  
27 The wholesale move to virtual work created an unbridgeable distance between individuals and  
28 between individuals and institutions. In an industry that relied heavily on interpersonal  
29 relationships, physical separation posed relational problems. Establishing new relationships and  
30 maintaining or strengthening older ones became difficult. Interactions with colleagues, leaders  
31 and clients play an essential role in shaping one's work identity (Goffman, 1959), and the switch  
32 to remote work made it difficult for some employee groups to secure and uphold a  
33 commendable work identity.  
34  
35  
36  
37  
38  
39  
40  
41

42 Participants reflected on their pre-lockdown work lives, with their recollections primarily  
43 focused on interpersonal relationships. The total institution of work-from-home regime  
44 disrupted the development of profitable workplace relationships, thus impeding individuals  
45 aspiring to effectively manage their career progression. They valued engaging in backstage  
46 activities with their colleagues in backstage settings in the traditional workplace, such as eating  
47 meals in a canteen, and recognised the importance of these interactions for team bonding,  
48 knowledge dissemination and career advancement. With the sudden move to virtual work and  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 the elimination of shared backstage spaces, the ability to build or strengthen a collective  
5  
6 identity suffered greatly.

7  
8 'I miss being with my colleagues. I liked going into the office even if I did not  
9  
10 always like the commuting, but I liked being in the office, sitting, having lunch  
11  
12 with people or having social chats with them. Meeting for coffee, you learn a  
13  
14 lot more about people than when you're in a formal meeting room. It's worse  
15  
16 on Zoom. You cannot eat lunch together online because people have other  
17  
18 things to do at home. When you are out of sight, you are out of everyone's  
19  
20 mind.' (Gillian)

21  
22  
23 Developing good cross-ethnic relationships at work became more difficult by the addition of  
24  
25 virtual complexity. Trust, a key component of interactions between individuals from different  
26  
27 backgrounds, was damaged by the sole reliance on virtual interactions.

28  
29 'Every time you meet someone face-to-face and you have an interaction with  
30  
31 them, your interaction is enhanced. You can be two completely different  
32  
33 individuals; however, your empathy for that person grows and develops.  
34  
35 Meeting someone over Zoom erodes relationships when we are accustomed  
36  
37 to face-to-face interactions.' (William)

38  
39 Black women across all age groups faced a predicament, torn between the fear of being  
40  
41 overlooked or unseen by others, while simultaneously facing heightened visibility during virtual  
42  
43 team meetings. For Black women who were comparatively new to their teams, virtual  
44  
45 interactions with co-workers underscored their outsider status.

46  
47 'On the video calls, they have a lot of internal jokes. And I feel I cannot relate  
48  
49 to them. I sometimes feel isolated. If I want to talk to them, it ends up being a  
50  
51 formal conversation.' (Micki)

52  
53 Conversely, Black women in senior roles emphasised that individuals bore the responsibility of  
54  
55 finding new impression management behaviours in virtual meetings.  
56  
57  
58  
59  
60

1  
2  
3  
4 'Your company is not going to help you. Be vocal, be visible and find the  
5 representation you need to project in online meetings. Know your  
6 weaknesses and work to compensate for them. Do it yourself.' (Louise)  
7  
8  
9

10  
11 Furthermore, the lack of access to backstage activities in the workplace eliminated small talk,  
12 which is an important resource for work identity. Its absence hindered employees' proactive  
13 efforts to minimise the risk of exclusion from important decision-making processes. For  
14 participants considering future career prospects, the paucity of small talk compounded the  
15 challenges of maintaining visibility within the professional sphere.  
16  
17  
18  
19

20  
21 'When you are in the office, you have access to a lot of information because  
22 people talk. You can find out things from senior people to the cleaners. You  
23 have ears everywhere in the office. Now, everyone is working from home, and  
24 there are meetings that are taking place that you are not aware of. Before if  
25 you learned about these meetings from other people, you could ask why you  
26 were not invited and make a case for why you should attend. Now, you do not  
27 have any awareness about these things.' (Angela)  
28  
29  
30  
31  
32  
33

34 The inability to participate in small talks was not the sole aspect being mourned. The  
35 significance of watching small-talk interactions in backstage settings of organisational life, even  
36 without direct involvement, gave participants a valuable tool to understand their social world,  
37 prepare for their present or future roles and adjust their behaviours for their audience.  
38  
39  
40  
41  
42

43 Contrary to the above experiences, participants whose work identities were damaged by their  
44 experiences of discrimination welcomed being separated from their colleagues and the industry  
45 at large. The variance in participants' experiences emphasises the complex relationship  
46 between workplace interactions and work identities.  
47  
48  
49

50  
51 'From a mental health perspective, every day has actually helped me. Not  
52 seeing the people who put you down helped me. I feel much better. And if I  
53 have to face those types of bullying people over the phone or video, I can take  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 15 minutes off and go on my Xbox to forget about them. If I were in the office,  
5 it would stew inside me all day.’ (Zoe)  
6  
7  
8  
9

### 10 5.2.1 Protecting occupational identities

11  
12 The challenges produced by the COVID-19 pandemic also affected participants in front office  
13 roles. Networking and interaction frame employees’ work identities in trading roles (Goffman,  
14 1959). This was especially salient for participants beginning their front office careers who  
15 wanted to establish themselves in the industry. Unstructured routines and interactions created  
16 doubts about ways to enhance their work identities in a changing work landscape.  
17  
18  
19

20  
21 ‘I am serious about my underwriting career. Meeting or talking to other  
22 underwriters helps because I learn from them. You can learn more from  
23 listening to their experiences, frustrations and plans. I feel that there is going  
24 to be a gap in my development, which slightly worries me. If this pandemic  
25 continues, I worry about how much longer it will take me to become a senior  
26 underwriter.’ (Nala)  
27  
28  
29  
30  
31  
32  
33  
34

35 Echoing these views, participants in the senior front office roles also shared similar perspectives  
36 on the formidable disadvantages that social distancing posed for new employees, thereby  
37 preventing them from forging an affinity with front office occupations and the industry. A  
38 recurring sentiment shared by this group was that a true appreciation for the industry came  
39 only through active involvement. As mentioned above, the London Insurance Market’s  
40 institutional context necessitates strong relations among employees in trading roles.  
41 Underwriters and brokers strongly identified with the industry and saw remote working as a  
42 constraining factor in fostering solidarity and a sense of belonging among their recently joined  
43 colleagues.  
44  
45  
46  
47  
48  
49  
50

51 ‘If we are all working remotely, underwriting will end up just like another desk  
52 job. I worry about this. You do not develop your soft skills, such as negotiating  
53 skills. What is great about our market is that you pick up many different skills  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 and knowledge because you are exposed to many different people. If you just  
5 sit behind a desk at home and if you are socially distant from your colleagues,  
6 it becomes a lonely and boring job. Why would you want to become an  
7 underwriter?’ (Heather)  
8  
9  
10

11  
12  
13 Moreover, front office senior employees expressed apprehensions that COVID-19 restrictions  
14 could potentially transform the industry into an invisible, backstage realm. They shared their  
15 worries that the symbolism behind the industry’s tangible and intangible props would have no  
16 meaning to the broader public. This perceived loss of meaning was considered detrimental for  
17 the preservation of their occupational identity.  
18  
19  
20  
21

22 ‘It was a hidden market to begin with but now it is buried. How can we excite  
23 young people to join us when they cannot see the buzz and energy of working  
24 here? Everything is soulless.’ (Nick)  
25  
26  
27  
28  
29

30 Senior Black employees in front office roles had additional concerns that the isolation of the  
31 industry from the public would act as a catalyst to amplify nepotism during the recruitment  
32 process for junior brokers and underwriters. They saw the gulf between the industry and Black  
33 communities widening during this period because ‘young Black people do not know anything  
34 about insurance in the first place’. While this indicated a fear of reduced access and  
35 opportunities for prospective Black labour market entrants, it also highlighted concerns that a  
36 severe underrepresentation of Black employees in the trading segment of the industry would  
37 marginalise the group’s collective work identities.

### 47 5.2.2 Power disparities between front and back office employees

48

49 The removal of shared physical spaces deepened the power disparities between front and back  
50 office employees. Participants in back office roles claimed that the power of the industry  
51 resided with underwriters and brokers, resulting in a feeling of being relegated to the status of  
52 a ‘second-class citizen’. In face-to-face interactions, employees in back office roles could  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 counter this low status by presenting themselves as valuable and worthwhile members of their  
5 organisations (Goffman, 1959). However, the shift to remote work strained the relationship  
6 between these two employee segments. Participants in back office roles lamented that the lack  
7 of direct personal interactions with their front office counterparts diminished opportunities to  
8 build cohesion between them.  
9  
10  
11  
12

13 'The greatest challenge is the ability to connect with people. I do not need to  
14 talk to everyone for more than 15 minutes. Sometimes, it only lasted for 30  
15 seconds. Like in "Hi, do you remember me? How was your weekend? By the  
16 way, you kind of owe me something." However, this is difficult to achieve  
17 now. As soon as you message someone, they know that you are chasing them,  
18 which creates negative vibes. Much of our work depends on relationship  
19 management because we are asking people to do things that are not central  
20 to their day-to-day jobs.' (Ian)  
21  
22  
23  
24  
25  
26  
27  
28  
29

30  
31 The elimination of in-person interactions presented obstacles for individuals who were  
32 considered out-group members based on their occupational backgrounds. Specifically,  
33 participants who shifted from back office to front office roles encountered difficulties in  
34 penetrating existing industry-wide networks, which primarily consisted of long-standing  
35 connections. They believed that they would have achieved some success in integrating with  
36 these networks in the absence of disruptions due to the pandemic. During the interviews, these  
37 individuals considered reverting to their back office roles. Their experiences further highlighted  
38 the segregation between front and back office functions in the market and the hierarchical  
39 relationship between the two. This hierarchy persisted even in digital working environments.  
40 The formation of new work identities were hindered when existing institutional norms  
41 intersected with disruptive external events.  
42  
43  
44  
45  
46  
47  
48  
49  
50

51  
52 Environmental duress triggered questions for back office participants regarding their  
53 involvement in the industry. Concerns about economic and labour market risks featured heavily  
54  
55  
56

1  
2  
3  
4 in their accounts. Some encountered obstacles in pursuing their plans to relocate to different  
5 industries because the pandemic had halted hiring plans everywhere. Others opted to protect  
6 their interests in case the industry faced substantial losses. The escalating economic  
7 uncertainties, coupled with a severed sense of connection with colleagues, compelled  
8 participants in back office roles to consider separating from the industry to create space for the  
9 emergence of new work identities.  
10  
11  
12  
13

14  
15 'I am undergoing introspection. Who am I? What am I doing? Where do I want  
16 to belong? I have five years of experience in this area. I learned a lot and  
17 became this person. I like the people I work with, but I wonder if I should do  
18 other things.' (Anya)  
19  
20  
21

22  
23 Notably, front office employees were not fazed by the threat to employment. They indicated  
24 that the industry's stability, especially during economic downturns and other macro-level  
25 threats, was its enduring appeal. This stark contrast in perspectives further exemplified the  
26 ways in which the pandemic had accentuated the disparities between front and back office  
27 roles.  
28  
29  
30

31  
32 'When I was in university, a lecturer said this to me: that insurance is a trillion-  
33 dollar industry and if you go into insurance as an underwriter or broker, you  
34 will always have a job. And I thought, yes, I would always like to have a job  
35 and not worry about it. So, whatever is going on outside, I know that I am safe  
36 inside here.' (Falcon)  
37  
38  
39  
40  
41  
42  
43  
44

## 45 6.0 Discussion and implications

46  
47 To address the need for developing new theoretical perspectives that provide a deeper  
48 understanding of how knowledge workers fared during the pandemic crisis (Akkermans *et al.*,  
49 2020; Caligiuri *et al.*, 2020; Carnevale and Hatak, 2020; Waizenegger *et al.*, 2020), this study  
50 employed Goffman's concepts as a theoretical lens to investigate the manner in which  
51 employees of the London Insurance Market perceived and managed their work identities  
52  
53  
54  
55  
56

1  
2  
3  
4 during this challenging period. Two key conceptual contributions were identified from this  
5 qualitative analysis: deterioration and disconnection. These concepts highlight that the erosion  
6 of distinct boundaries, disintegration of established structures, imposition of novel structural  
7 forces and estrangement from co-workers and institutions had adverse effects on participants'  
8 work identities. Moreover, participants' experiences of deterioration and disconnection were  
9 intertwined with their demographic and occupational identities, leading to the further  
10 entrenchment of existing inequalities and power dynamics. While some differences were  
11 observed in the data, there was a noteworthy degree of uniformity as a consequence of  
12 participants' collective navigation of the same unprecedented crisis (see Table 3). The notion  
13 that actors need social interactions to shape and define their work identities is consistent with  
14 the stream of research that has focused on the dynamic process of constructing work identities  
15 (Alvesson, 2001; Methot *et al.*, 2018; Walsh and Gordon, 2008). However, the establishment  
16 and sustenance of work identities is also reliant on individuals having separate frontstage and  
17 backstage settings to understand and interpret their conduct and those of their significant  
18 others.  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32

33 This study contributes to the existing literature in three major ways. First, it expands the  
34 growing academic focus on the ramifications of COVID-19 for knowledge workers (Adisa *et al.*,  
35 2023; Akkermans *et al.*, 2020; Carillo *et al.*, 2021; Hughes and Donnelly, 2022) to help recognise  
36 the critical importance of employees to contemporary organisations (Collings *et al.*, 2021a and  
37 2021b). This was achieved by placing a central focus on employees' perspectives to understand  
38 the evolving relationship between their work identities and the pandemic. Second, it applies  
39 and extends the existing knowledge on work identities from diverse literatures by analysing the  
40 challenges faced by participants in upholding, adjusting or safeguarding their work identities  
41 within an extraordinary context defined by unplanned and profound changes (Ashford *et al.*,  
42 2018; Conroy and O'Leary-Kelly, 2014; Daskalaki and Simosi, 2017; Petriglieri, 2011;  
43 Wrzesniewski, 2002). Finally, it advances knowledge of the underexplored domain of the  
44 London Insurance Market, where the fundamental aspects of conducting and transacting  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 businesses (Barrett, 1999; Barrett and Walsham, 1999; Heracleous and Barrett, 2001; Smet *et*  
5 *al.*, 2015) were upended by the macro-level restrictions imposed during the pandemic.  
6  
7

8  
9  
10 These findings are significant for practitioners in the London Insurance Market and other  
11 occupational sectors. Organisations can enhance their and their employees' resilience by  
12 developing and implementing protocols that address unplanned crises. These protocols should  
13 include clear communications on measures to safeguard employee welfare and security during  
14 challenging times. At the time of writing, the surface resumption of everyday life does not  
15 conceal the fact that fundamentally society has changed. Data from the Office for National  
16 Statistics (2023) confirms the enduring transformation of the organisational work domain  
17 brought about by the pandemic. As companies downsize their physical spaces (Sweney, 2023),  
18 some employees have transitioned to full-time remote work (Venkataramakrishnan, 2023).  
19 Evidence from this study and the Office for National Statistics (2023) shows that employees  
20 holding senior positions, belonging to older age groups or having longer tenures in their  
21 organisations may face fewer career disadvantages while working remotely. On the other hand,  
22 younger employees and newer labour market entrants face hurdles in cultivating skills and  
23 knowledge through observation, inquiry and mentorship from their more established and  
24 experienced colleagues when the latter group is working remotely (Foy and Gill, 2023; Quinio  
25 and Uddin, 2023). The deterioration of work identities, intensified by disconnection from  
26 others, may lead to demoralisation and a shortage of the human capital needed to address  
27 future challenges. Thus, organisations will have to confront several challenges, including the  
28 task of building a workforce aligned with their values and goals, devising initiatives to cultivate  
29 skilled workers and developing strategies to help remote workers recognise the value that their  
30 skills and contributions bring to the broader institutional context.

## 7.0 Limitations and future research

The study findings should be understood in the context of mandated work-from-home structures during the COVID-19 pandemic. Nevertheless, this study has some limitations that should be addressed in future research. The disproportionately high representation of women and underrepresentation of men in the sample could have led to the findings inclining towards women's experiences. Additionally, the sample size was relatively small ( $N = 36$ ). Therefore, it cannot be assumed that the findings of this study are applicable to all knowledge workers who grappled with changes during this period.

This study targeted organisational members of a single sector in the UK. Similar studies should be conducted to extend these findings to other sectors. In this study, the blurring of frontstage and backstage settings was found to undermine career identities; however, employees could have substituted their in-person backstage settings with virtual ones (Hafermalz and Riemer, 2021). More research is required to understand if and how employees created virtual backstage settings during this period, and the types of backstage interactions they used to support their work identities. Finally, while visible and invisible demographic attributes received some consideration in this study, there is an opportunity for further research to delve deeper into how various workplace demographic groups reacted to the pandemic duress.

Employee Relations

**Table 2: Summary of findings**

Topics from data	Thematic clusters	Aggregate concepts
<p>Negative emotions.</p> <p>Tensions between work and domestic duties.</p> <p>Long working hours.</p>	<p>Loss of clear boundaries meant participants could not compartmentalise their different identities.</p>	<b>Deterioration</b>
<p>Concerns about being judged differently on virtual settings.</p> <p>Discomfort about switching to casual outfits for work.</p> <p>Fears about stigmas being exposed.</p>	<p>Loss of clear boundaries led to participants fearing a loss control of how they presented themselves to their co-workers.</p>	
<p>Informal interactions came to a halt.</p> <p>Barriers reinforced when cultivating cross ethnicity relations at work.</p> <p>Loss of small talk among colleagues.</p>	<p>Disintegrating shared identity.</p>	<b>Disconnection</b>
<p>Junior members in front-office roles worried about prospects.</p> <p>Senior members in front-office roles worried about the industry losing its meaning to others.</p>	<p>Protecting occupational identities.</p>	
<p>Further lowering of the status of back-office employees.</p> <p>Back-office employees unable to transition to front-office roles.</p> <p>Back-office employees considering disaffiliating from the industry.</p>	<p>Power disparities between front- and back-office employees.</p>	

**Table 3:** Topics linked to percentage of sample

Topics	N =	Percentage of sample
Negative emotions.	29	80
Tensions between work and domestic duties.	16	44
Long working hours.	36	100
Concerns about being judged differently on virtual settings.	27	75
Discomfort about switching to casual outfits for work.	8	22
Fears about stigmas being exposed.	11	30
Informal interactions came to a halt.	35	97
Barriers reinforced when cultivating cross ethnicity relations at work.	17	47
Loss of small talk among colleagues.	30	83
Topics related to front- or back-office	N =	Percentage of front-office or back-office sample
Junior members in front-office roles worried about prospects.	8	50
Senior members in front-office roles worried about the industry losing its meaning to others.	7	44
Further lowering of the status of back-office employees.	15	75
Back-office employees unable to transition to front-office roles.	6	30
Back-office employees considering disaffiliating from the industry.	10	50
