INTRODUCTION

Contemporary international investment law is characterized by fragmentation.1 Disputes are heard by a variety of tribunals,2 which often are constituted solely for the purpose of hearing a single claim.3 The law applicable in a dispute is usually found in a bilateral agreement, applicable only between the two states connected to the dispute, rather than in a multilateral treaty or customary international law.4 Moreover, the international investment community itself is profoundly divided on many issues of substantive law, meaning both that the interpretation given to international investment law by a tribunal will be determined largely by those who sit on it, and that even the most authoritative texts are recognized as representing only their authors’ own views, rather than constituting a clarifying statement of the law as it actually stands.5

Given this context of fragmentation, it is perhaps unsurprising that states negotiating investment treaties have consistently incorporated one of the traditional means of bringing uniformity to international obligations, the

4. THE INTERNATIONAL CENTRE FOR SETTLEMENT OF INVESTMENT DISPUTES [ICSID], THE ICSID CASELOAD STATISTICS 10 (2010), available at http://icsid.worldbank.org/ICSID/FromServlet?requestType=ICSIDDocRH&actionVal=ShowDocument &CaseLoadStatistics=True&language=English (noting that multilateral treaties have served as the basis for only eleven percent of all cases brought to ICSID).

5. For example, in the 2010 “OGEMID of the Year” Awards, a survey of international investment arbitration specialists, four of the six decisions nominated for “Arbitration Decision of the Year” were also nominated for “Most Surprising or Controversial Arbitration Decision of the Year” Ogemid Awards, TRANSNATIONAL DISPUTE MANAGEMENT, http://www.transnational-dispute-management.com/ogemidawards/ (last visited Mar. 15, 2012). Similarly, in 2008, the same decision won both categories. Id.
Most Favored Nation (MFN) clause. An MFN clause in an investment treaty is fundamentally a promise between the two states party to the treaty that neither state will give to investors from any third state more favorable treatment than that given to investors from the other state party to the treaty. If more favorable treatment is provided to investors from a third state, an obligation arises to provide equivalent treatment to those investors benefiting from the MFN clause.

While MFN clauses in investment treaties do not directly limit the fragmentation of international investment law, they can serve to harmonize the law under which foreign investors from different states operate. Absent MFN clauses, states will compete with one another to ensure that their investors receive the most favorable treatment given by a particular state,

7. An MFN clause in an investment treaty may refer to “investors.” However, it may refer instead to “investments,” or even to both investors and investments. For purposes of simplicity, this Article will refer simply to investors unless the difference between investors and investments is important to the analysis.

8. Stephen Fietta, *Most Favoured Nation Treatment and Dispute Resolution Under Bilateral Investment Treaties: A Turning Point?*, 8 INT’L ARB. L. REV. 131, 131 (2005) (“[S]uch provisions require each contracting state to accord to investors of the other contracting state that is no less favourable than that accorded to the investors of third states.”); see also Schwarzenberger, supra note 6, at 96 (“Used in its technical sense, the m.f.n. standard may be defined as treatment on a footing not inferior to that of the most favoured third State.”); Stephen D. Sutton, *Emilio Augustin Maffezini v. Kingdom of Spain and the ICSID Secretary-General’s Screening Power*, 21 ARB. INT’L 113, 120 (2005) (“The principles that apply are that any basic treaty containing the clause could attract provisions of another treaty signed by one of the parties containing elements that are more favourable to the beneficiary . . . .” (quoting international investment arbitrator Francisco Orrego Vicuna)).

9. Stephan W. Schill, *Multilateralizing Investment Treaties Through Most-Favored-Nation Clauses*, 27 BERKELEY J. INT’L L. 496, 502 (2009) (“MFN clauses oblige the State granting MFN treatment to extend to the beneficiary State the treatment accorded to third States in case this treatment is more favourable than the treatment under the treaty between the granting State and the beneficiary State.”).

10. Bryan Coutain, *The Unconditional Most-Favored-Nation Clause and the Maintenance of the Liberal Trade Regime in the Postwar 1870s*, 63 INT’L ORG. 139, 146 (2009) (“[A] bilateral treaty is to a certain extent converted into a multilateral treaty by the unconditional most-favored-nation principle.” (internal quotation marks omitted)); Houde, supra note 6, at 129 (describing the MFN clause as “the multilateralisation instrument par excellence of the benefits accorded to foreign investors and their investments” (internal quotation marks and italics omitted)).
thereby generating a diversity of legal regimes. MFN clauses, by contrast, ensure that whenever benefits are given to investors from one state, they must also be provided to investors from any other state with an applicable MFN clause, thereby ensuring equality of treatment.\textsuperscript{11}

But, while MFN clauses are potentially a means of reducing the level of fragmentation in international investment law, they carry a significant risk of overinterpretation.\textsuperscript{12} MFN clauses are often described as being primarily a means of eliminating discrimination within a given market.\textsuperscript{13} However de-

\textsuperscript{11} It has occasionally been argued that equality of commercial treatment is a basic principle of international law and so does not need to be secured via a treaty clause. As the early twentieth century diplomat Culbertson stated: "[A]s a diplomatic representative of the United States I took the position that... equality of commercial treatment, as it is applied in the most-favored-nation principle... is a right of international common law and that a government has the obligation to grant that equality." William S. Culbertson, \textit{Most-Favored-Nation Treatment}, 31 \textit{Proc. Am. Soc'y Int'l L.} 73, 74 (1937); see also A. Mertens, \textit{A Defense of the Most-Favored-Nation Clause}, 156 \textit{Annals Am. Acad. Pol. & Soc. Sci.} 107, 109 (1931) ("Most-favored-nation treatment is not only a condition of economic equilibrium; it is more and more coming to be identified with the regime of rights."). However, while a useful political stance, this view is ultimately inconsistent with international legal practice. U.N. \textit{Conf. on Trade & Dev. [UNCTAD], Most-Favoured-Nation Treatment}, at 2, U.N. Doc. UNCTAD/ITE/IIT/10(Vol. III), U.N. Sales No. E.99.II.D.11 (1999) (noting that "MFN is generally more than the minimum standard required under customary international law"); Houde, \textit{supra} note 6, at 129 ("While MFN is a standard of treatment which has been linked by some to the principle of the equality of States, the prevailing view is that a MFN obligation exists only when a treaty clause creates it."); Schwarzenberger, \textit{supra} note 6, at 103 ("[T]hough widely recognized in treaties by which States grant to each other reciprocal freedom of commerce, it cannot be admitted that that principle has as yet developed into a rule of customary international law.").

\textsuperscript{12} As one commentator has noted:

Thus, if MFN clauses are viewed as having the primary objective of promoting non-discrimination and harmonisation, then an adjudicator may consider that the very purpose of the clause is to permit, indeed encourage, a comparison to other [Bilateral Investment Treaties] to ensure that the most favourable rights, including procedural rights, are available.

\textsuperscript{13} See, e.g., UNCTAD, \textit{supra} note 11, at 4 ("In other words, the MFN standard seeks to prevent discrimination against investors from foreign countries on grounds of their nationality."); Coutain, \textit{supra} note 10, at 146 ("The MFN clause was devised to reduce uncertainty by automatically preventing discrimination against treaty-powers and repetitive treaty renegotiations every time conditions are altered by a new commercial treaty." (internal quotation marks omitted)); Hornbeck, \textit{supra} note 6, at 398 ("The object sought is uniform treatment without discrimination."); Stephan W. Schill, \textit{Most-Favored-Nation Clauses as a Basis of Jurisdiction in Investment Treaty Arbitration: Arbitral Jurisprudence at a Crossroads}, 10 J. World Invest. & Trade 189, 210 (2009) ("[T]he rationale of MFN clauses consists in creating a level playing field for foreign investors independent of their nationality.").
sensible such a description is in general terms, a teleological interpretation of this type risks allowing the goal of market equalization to override the operation of the MFN clause itself. That is, it encourages tribunals to lay aside technical arguments as to the operation of the clause and simply interpret it in the way that will most effectively eliminate market discrimination. Indeed, this effect can already be seen in the discussions of MFN clauses given by some investment arbitration tribunals and commentators.

The goal of this Article is to reduce the dangers inherent in such teleological interpretations by clarifying certain boundaries to the operation of MFN clauses in international investment law. Of course, although MFN clauses are a common feature of international investment agreements, the language in which they are expressed can differ significantly, and such

14. For the purposes of this Article, teleological interpretation means an interpretation of an MFN clause that is based upon the policy goals the interpreting body believes motivated the clause’s adoption.

15. Moreover, portraying MFN clauses as a mechanism for eliminating discrimination ignores the fact that an MFN clause does not prevent discrimination in favor of the beneficiary of the clause, just against it. See, e.g., Schwarzenberger, supra note 6, at 96 (“M.f.n. treatment does not exclude the grant by the promisor of additional advantages beyond those conceded to the most favored third State. M.f.n. treatment is compatible with preferential treatment of the beneficiary by the promisor.”). Yet surely if the purpose of MFN clauses was to eliminate market discrimination, they would eliminate all discrimination, not just discrimination unfavorable to the beneficiary of the clause.

16. See, e.g., Siemens A.G. v. Argentine Republic, ICSID Case No. ARB/02/8, Decision on Jurisdiction, ¶¶ 108–09 (Aug. 3, 2004) (allowing the claimant access to the more favorable aspects of a dispute resolution clause in a third-state treaty, but excluding the less favorable aspects of that clause, on the ground that MFN clauses relate only to more favorable treatment); Emilio Agustín Maffezini v. Kingdom of Spain, ICSID Case No. ARB/97/1, Objections to Jurisdiction, ¶¶ 54–57 (Jan. 25, 2000) (holding that MFN clauses apply to dispute resolution procedures on the ground that “[i]nternational arbitration and other dispute settlement arrangements . . . are essential . . . to the protection of the rights envisaged under the pertinent treaties”); Schill, supra note 9, at 568–69 (“MFN clauses therefore form part of the ongoing process of multilateralizing international investment relations and constitute one of the explicit normative bases of this development.”).

17. It is, of course, not being maintained that no previous work has been done on the operation of MFN clauses in international investment law. However, such work as has been done has been focused upon specific issues relating to MFN clauses, rather than addressing the operation of MFN clauses themselves. See, e.g., Alejandro Faya Rodriguez, The Most-Favored-Nation Clause in International Investment Agreements: A Tool for Treaty Shopping, 25 J. INT’L Arb. 89 (2008); Schill, supra note 13; Ruth Teitelbaum, Who’s Afraid of Maffezini? Recent Developments in the Interpretation of Most Favored Nation Clauses, 22 J. INT’L Arb. 225 (2005); Mara Valenti, The Most Favored Nation Clause in BITs as a Basis for Jurisdiction in Foreign Investor-Host State Arbitration, 24 INT’L Arb. 447 (2008); Scott Vesel, Clearing a Path Through a Tangled Jurisprudence: Most-Favored-Nation Clauses and Dispute Settlement Provisions in Bilateral Investment Treaties, 32 Yale J. INT’L Arb. 125 (2007).

18. UNCTAD, supra note 11, at 39 (noting that MFN treatment “is a core principle in international investment agreements”); Fietta, supra note 8, at 131 (“The vast majority of BITs in force around the world today contain some form of MFN provision.”).
differences will affect their operation. Nonetheless, while attention must ultimately be paid to the specific language adopted in each clause, this does not mean that nothing can be said regarding the operation of such clauses generally. Rather, it simply means that any limitations described here can be eliminated or varied by states through the language they choose for their specific MFN clause.

Part I of this Article will discuss the historical development of MFN clauses in international agreements in order to provide the background against which the current use of MFN clauses in international investment agreements should be understood. Part II then concludes the historical discussion by examining the place that MFN clauses have achieved in contemporary international investment law.

Part III begins the analysis of MFN clauses themselves by discussing the limits to the operation of MFN clauses that have already been recognized by noninvestment international tribunals. The limitations discussed in this Part are important to investment law not only because they have been expressly adopted by a series of investment arbitration tribunals, but because the operation of MFN clauses in international investment law is ultimately merely a specialized development of the operation of such clauses in inter-

19. Nils Eliasson, Investor-State Arbitration and Chinese Investors: Recent Developments in Light of the Decision on Jurisdiction in the Case Mr. Tza Yap Shum v. The Republic of Peru, 2 CONTEMP. ASIA ARB. J. 347, 361 (2009); see also Houde, supra note 6, at 158 ("The proper application and interpretation of a particular MFN clause in a particular case requires a careful examination of the text of that provision undertaken in accordance with the treaty interpretation rules as set out in the Vienna Convention."); Schwarzenberger, supra note 6, at 103 ("It is well to keep in mind the warning voiced by Judge Anzilotti, and more recently by Sir Arnold McNair, that speaking strictly, there is no such thing as the most-favoured-nation clause: every treaty requires independent examination." (footnotes and quotation marks omitted)).

20. As noted by one early commentator,

[]he parties concerned should clearly express their intention; but it might happen, and indeed it would often happen, that they did not do so. Provision must be made in international law, as in municipal law, for cases in which there was no stipulation in the text, and for cases in which the text was not clear and precise.

Quincy Wright, The Most-Favored-Nation Clause, 21 AM. J. INT’L L. 760, 762 (1927); see also UNCTAD, supra note 11, at 6 ("There is no evidence that, by using different wording, the parties to these various agreements intended to give the MFN clauses a different scope. Whatever the specific terminology used, it does not change the basic thrust of MFN."); Schwarzenberger, supra note 6, at 104 ("Though there is no such thing as the m.f.n. clause, it is equally necessary to emphasize that there is such a thing as the m.f.n. standard."). Another commentator emphasizes that MFN has become a term of art:

‘MFN’ is a term of art in international law and treaty obligations employing this term of art have an ancient pedigree. When state parties enter into modern investment treaties with an MFN clause, they surely do not intend to relegate the received wisdom on the nature, scope and effect of such clauses to the dustbin of history.

national law more generally. Consequently, although these limits were not originally recognized in the international investment law context, they are nonetheless applicable to MFN clauses in international investment agreements.

Part IV then presents this Article's original analysis of MFN clauses, explaining certain limitations that must be recognized in the operation of MFN clauses in international investment law. These boundaries are identified as (i) the general inapplicability of such clauses to treaty provisions already in place when the MFN clause was adopted; (ii) the need to evaluate the alleged "favorability" of treatment by referring to the broad class of investors from the Home State, rather than the particular investor invoking the MFN clause; and (iii) the ability of an MFN clause to deprive an investor of access to the terms of the Basic Treaty.

I. HISTORICAL DEVELOPMENT OF MFN TREATMENT

Study of the historical development of MFN clauses in international agreements is of more than academic interest for any attempt to clarify the boundaries within which such clauses must operate. Proponents of the nondiscrimination interpretation of MFN clauses, after all, routinely cite to this history as evidence of the overriding antidiscrimination purpose of MFN clauses. As will be shown in this Part of the Article, however, a close examination of this history reveals a very different use of MFN clauses by states in which MFN clauses are used tactically as a means of gaining advantage over competitors, rather than due to any idealistic commitment to nondiscrimination. Consequently, while a correct understanding of the historical development of MFN clauses cannot by itself demonstrate that the nondiscrimination interpretation of contemporary MFN clauses is incorrect, it does serve to remove a convenient justification for adoption of this approach. Moreover, an awareness of the varied purposes a state can have in adopting an MFN clause underlines clearly the need to attend to the specific details regarding each MFN clause, rather than relying for interpretative purposes on some predecided teleological conclusion.

21. On the relationship between international investment law and public international law, see generally the essays in Stephan W. Schill, International Investment Law and Public International Law (2010); see also Jürgen Bering et al., Sub-Comm. on Inv. Law, Int’l Law Ass’n German Branch, General Public International Law and International Investment Law—A Research Sketch on Selected Issues (2009).

22. Home State will be used in this Article to refer to the state from which a foreign investor is a national.

23. Basic Treaty will be used in this Article to refer to the treaty containing the MFN clause.

24. See, e.g., Schill, supra note 9, at 512 (arguing that the adoption of the MFN clause "was closely connected to the free trade movement in the Nineteenth and early Twentieth Centuries").
Although MFN clauses have come to particular prominence in the economic sphere, nothing about their operation restricts them to economic matters, and indeed their original genesis appears to have been in a far broader sociopolitical context. While the precise origin of the MFN clause is still contested, one commentator has traced its use back as far as the early Holy Roman Empire,\(^\text{25}\) while others cite its development as occurring sometime in the medieval period.\(^\text{26}\) Realistically, however, as an MFN clause fundamentally constitutes just a promise from one state to another that no third state will receive better treatment in some specific substantive field, no conclusive “birthdate” is likely to be ascertainable. Such promises have, after all, likely been made for as long as states have entered into agreements with one another.

Nonetheless, whatever the origins of the MFN clause, it was unquestionably with the rise of international commerce that they gained their importance in international law.\(^\text{27}\) While the expression “most-favored nation” only became common in the seventeenth century,\(^\text{28}\) the rise of international commerce in the late medieval period saw states adopting

\(^{25}\) Schwarzenberger, supra note 6, at 97 (referring to “[i]mperial grants of customs privileges to cities within the Holy Roman Empire on the basis of favours obtained ‘by whatsoever other town’”); see also Eugene J. Conroy, The American Interpretation of the Most Favored Nation Clause, 12 CORNELL L.Q. 327, 338 (1926). Conroy notes:

There had been occasional crude quasi-most-favored nation clauses in antiquity, and a few among the commercial cities of the Mediterranean during the Middle Ages, but the clause did not come into any sort of regular use until the seventeenth century, with the rise of the mercantile system, and the bitter competition for trade and colonies that it brought in.

\(^{26}\) See, e.g., UNCTAD, supra note 11, at 14 (“The first example of an MFN clause was when King Henry V of England signed a treaty (Treaty for Mercantile Intercourse with Flanders on 17 August 1417) with Duke John of Burgundy in Amiens . . . .”); Hornbeck, supra note 6, at 398 (arguing that the use of MFN clauses can be traced to as early as 1226, when Emperor Frederick II of the Holy Roman Empire signed a treaty granting concessions to the citizens of Marseille that had previously only been available to citizens of Pisa and Genoa); Houde, supra note 6, at 129 (claiming the MFN clause “can be traced back to the twelfth century, although the phrase seems to have first appeared in the seventeenth century”); Schwarzenberger, supra note 6, at 97 (“T[he] principles of m.f.n. and national treatment make their first appearance in international law proper in the commercial treaties concluded during the twelfth century between England and the Continental powers and cities.”).

\(^{27}\) See Coutain, supra note 10, at 139 (asserting that by the nineteenth century use of the MFN clause was central enough to international commerce that it can be viewed as having had a primary role in “the maintenance of a liberal world economy in the turbulent 1870s”).

\(^{28}\) Hornbeck, supra note 6, at 395 (“The phrase ‘most-favoured-nation’ first appeared in commercial treaties toward the close of the seventeenth century.”); John M. Kline & Rodney D. Ludema, Building a Multilateral Framework for Investment: Comparing the Development of Trade and Investment Accords, 6 TRANSNAT’L CORP. 1, 6 (1997) (“The term ‘most favoured nation’ appears to have originated with the 1692 treaty between Denmark and the Hanse cities.”).
MFN clauses as a means of ensuring that their traders would compete in foreign markets on at least equal terms with traders from third states.

What is important for present purposes, however, is not the long history of the MFN clause, but the limited form taken by early instances of the clause. While contemporary MFN clauses are generally recognized as being applicable to any benefit granted within a specified substantive area,29 including those benefits granted after the MFN clause comes into effect,30 early MFN clauses referenced specific benefits already being received by specific third parties and constituted solely an agreement to extend those specific privileges to the beneficiary of the MFN clause.31 That is, MFN clauses were initially not generalized promises that no third state would at any time be treated more favorably than the beneficiary of the MFN clause. They were, rather, grants to the beneficiary of the MFN clause of specific benefits already received by specific third states.

Early MFN clauses, thus, were unilateral, specific, and retrospective. Rather than constituting an agreement by both states that each would provide MFN treatment to the other, they were instead an agreement by one state alone to extend MFN treatment to the other (i.e., they were unilateral). Moreover, they were not a generalized promise that no third state would receive better treatment than that given to the state benefiting from the MFN clause. Rather, they identified specific benefits that were already being provided to a third state, and constituted an undertaking that these same benefits would also be provided to the state benefiting from the MFN clause (i.e., they were specific). Finally, because they applied only to the specific benefits identified in the clause, they applied solely to treatment already being given to one or more third states. They did not, that is, require the state offering MFN treatment to maintain the equality of the state benefiting from the MFN clause by also extending to it any benefits granted to third states in the future (i.e., they were retrospective).

30. Id. at 53 ("A most-favoured-nation clause, unless otherwise agreed, obviously attracts benefits extended to a third State both before and after the entry into force of the treaty containing the clause."); Comm. of Experts for the Progressive Codification of Int’l Law, Rep. of the Sub-Comm., The Most-Favoured-Nation Clause, League of Nations Doc. C.205.M.79 1927 V (1927), reprinted in 22 AM. J. INT’L L. (SPECIAL SUPPLEMENT) 133, 134 (1928) [hereinafter Comm. of Experts] ("‘[T]he provision known as the most-favoured-nation clause was devised to ensure to the contracting States not only the benefit of concessions previously made but also of those subsequently to be made by either of the contracting States.’" (quoting WILLIAM S. CULBERTSON, INTERNATIONAL ECONOMIC POLICIES 56 (1925))).
31. Hornbeck, supra note 6, at 399–400 ("In the beginning, this extension of favors was made but to one or two specified states. . . . The next step was to extend the advantages to include such favors as should be granted to certain other specified nations; then to include advantages granted to any nation whatsoever.").
Early MFN clauses, then, did not reflect any form of principled commitment to equality of treatment or impose serious constraints upon the freedom of a state to control its economic policies. Instead, they served solely as a mechanism for a sufficiently important trading partner to secure from a state benefits that were currently being received by major competitors. The state granting MFN treatment, however, remained completely free to provide more favorable treatment to states not mentioned in the clause, and also to provide additional benefits to the named third states in the future. MFN clauses at this time, then, were used only as a means of expansive drafting in a context of limited information, ensuring that the beneficiary state received all benefits currently received by its major competitors, rather than only those of which it was at that time aware.

However, a significant change occurred to the structure of MFN clauses in the seventeenth and eighteenth centuries, by which time the growth in global trade and commerce had resulted in these clauses becoming a standard feature of international economic agreements.\(^3\) While earlier MFN clauses had been unilateral, creating benefits for only one of the parties to the agreement, in this later era they began to be predominantly bilateral in operation, creating benefits for both states concerned.\(^3\) In addition, they were now also usually both general and prospective, applying to any benefit given to any third state within a particular substantive field, usually tariffs, and to both already-existing benefits and those given in the future.\(^3\)

Nonetheless, while states were at this point using MFN clauses as a generalized means of ensuring that their traders were not discriminated against in particular markets, it remains inaccurate to describe MFN clauses of this time as reflecting an attempt by states to eliminate market discrimi-

---

32. Hornbeck, supra note 6, at 401 ("During the nineteenth century, the use of the clause increased and became so common, in one or another of its various forms, that its appearance came to be looked upon almost as a matter of course."); Houde, supra note 6, at 129 ("MFN treaty clauses spread with the growth of commerce in the fifteenth and sixteenth centuries."); Schill, supra note 9, at 509 ("[T]he function of MFN clauses changed under the influence of mercantilist ideology in the course of the Seventeenth and Eighteenth Centuries.").

33. Conroy, supra note 25, at 330 ("The [bilateral clause] is the regular form; the unilateral clause is exceptional, and its presence indicates a position of hopeless inferiority in the promisor nation.").

34. UNCTAD, supra note 11, at 13 ("It was only in the seventeenth century that the point of reference for MFN was no longer a limited number of named countries, but any third state."); Schwarzenberger, supra note 6, at 97 ("The privileges granted to the beneficiary are no longer necessarily defined with reference to one or several specifically named countries . . . .").

35. Comm. of Experts, supra note 30, at 134 ("[T]he provision known as the most-favoured-nation clause was devised to ensure to the contracting States not only the benefit of concessions previously made but also those subsequently to be made by either of the contracting States.") (quoting Culbertson, supra note 30, at 56); Richard Pomfret, The Economics of Regional Trading Arrangements 17 (1997) ("The instrument for ensuring that tariff reduction was accomplished by diminishing discrimination among trading partners was the inclusion of the most-favoured-nation clause in commercial treaties.").
nation. MFN clauses were, after all, even at the height of “free trade fervor” in the mid-nineteenth century, used tactically by states. They were incorporated into agreements when doing so would provide political benefits, and excluded when it would not.36

This tactical use of MFN clauses became most explicit in the treaty-making activities of the United States in the nineteenth century.37 On its emergence into international commerce in the late eighteenth century, the United States had found itself in an international market heavily geared against it.38 As a producer of primarily agricultural products, the United States relied on exportation of such products to generate the income necessary to pay for the importation of manufactured products from Europe.39 However, European nations had erected large tariff barriers against the importation of agricultural products, and unless the United States could negotiate lower tariffs, its products could not compete in European markets.40 Negotiating lower tariffs was certainly possible, but if the United States agreed to include MFN clauses in its treaties, as had become standard by that time, each negotiated reduction would automatically be transferred to every other nation with which the United States had an MFN clause.41 In effect, the United States would gain tariff reductions from just one country, while giving them away freely to every other European state.

36. Pomfret, supra note 35, at 33 (“Between 1860 and 1930 the principle of non-discrimination governed the commercial policies of the major trading nations. . . . At the same time, there were frequent deviations from non-discriminatory policies [that] . . . provided evidence of governments viewing discriminatory trade policies as serving national purposes.”); Robert Pahre, Most-Favored-Nation Clauses and Clustered Negotiations, 55 INT’L ORG. 859, 873 (2001) (arguing that “MFN must be understood as a regime norm chosen for political reasons independent of the tariff bargaining problem”).

37. Tactical use of MFN clauses can, of course, also be seen in later periods and in the treaty practices of other states. Moreover, MFN clauses have at times even been used as a tactical tool for exerting purely political pressure, rather than merely gaining economic advantage. See, e.g., Theodore C. Sorensen, Most-Favored-Nation and Less Favorite Nations, 52 FOREIGN AFF. 273, 273 (1974) (discussing a bill proposed to the U.S. Congress that would “deny to any ‘nonmarket economy country’ eligibility for most-favored-nation tariff treatment . . . during any period in which that country denies to its citizens the right or opportunity to emigrate, specifically by imposing more than a nominal tax or other charge.”).

38. Conroy, supra note 25, at 337–38 (“The introduction and rise of the conditional form of the clause was due to . . . an attempt by the United States to break down the impossible tariffs and ironclad monopolies which the mercantile system, then at its height, had established in Europe.”).

39. Id. at 339.

40. Id.

41. That the United States’ approach to the MFN clause arose from its concern with control over its negotiating positions, rather than a protectionist opposition to low tariffs, is indicated by the fact that even while insisting on the use of conditional MFN clauses, the United States was quite liberal in its voluntary reductions in tariffs. Carl Kreider, The Most-Favored-Nation Clause, 39 AM. ECON. REV. 1039, 1041 (1949) (book review).
The solution adopted by the United States was what came to be known as the conditional MFN clause.\textsuperscript{42} Prior practice regarding MFN clauses had established that as soon as more favorable treatment was provided to any third state, the state benefiting from the MFN clause immediately gained the right to the same treatment, without having to offer anything in return.\textsuperscript{43} That is, MFN clauses were unconditional in their operation. The conditional MFN clauses included within U.S. treaties, however, required that in order for the state benefiting from the MFN clause to gain access to any more favorable treatment granted to a third state, it had to offer the United States a concession equivalent to that given by the third state.\textsuperscript{44} If no equivalent compensation was offered, no obligation to extend the more favorable treatment to the beneficiary arose.\textsuperscript{45} Since the United States was the ultimate judge of what constituted equivalent value, the conditional MFN clause was effectively just an invitation to renegotiate the terms of the original treaty.\textsuperscript{46}

The justification publicly offered by the United States for its insistence on the use of conditional MFN clauses was that providing a benefit to a state via an MFN clause without securing equivalent compensation to that given by the original recipient of the benefit actually privileged the beneficiary of the MFN clause.\textsuperscript{47} It therefore created precisely the inequality of treatment

\textsuperscript{42} The earliest known conditional MFN clause appeared in a treaty concluded between the United States and France in 1778. POMFRET, supra note 35, at 18 (“From its first commercial treaty, with France in 1778, until 1923 the USA maintained that MFN pledges must be interpreted as conditional, even when the precise wording of a treaty was unclear.”); Richard Snyder, The MFN Clause and Recent Trade Practices, 55 POL. SCI. Q. 77, 79 (1940).

\textsuperscript{43} Meinhard Hilf & Robin Geiβ, Most Favoured Nation Clause, MAX PLANCK ENCYCLOPEDIA OF PUB. INT’L L. ONLINE EDITION, ¶ 13, http://www.mpepil.com (search for “Most Favoured-Nation Clause” in the search box) (subscribers only) (last updated Sept. 2009) (“Until the late 18th century the clause was exclusively drafted in an unconditional manner, [i.e.,] the right to most-favoured-nation treatment would inure automatically as soon as a third State was more favourably treated than the beneficiary State with regard to the subject matter comprised by the clause.”).

\textsuperscript{44} Comm. of Experts, supra note 30, at 135–36.

\textsuperscript{45} Chester Lloyd Jones, The American Interpretation of the ‘Most Favored Nation’ Clause, 32 ANNALS AM. ACAD. POL. & SOC. SCI. 119, 123 (1908) (“Even when the second nation offers the same nominal concessions as given by the first it cannot secure identical treatment under the clause unless the treaty-making power considers the second sacrifice actually equal to the first.”); Hilf & Geiβ, supra note 43, ¶ 14.

\textsuperscript{46} Conroy, supra note 25, at 336 (“The claiming of a favour under the conditional clause necessitates a great deal of negotiation.”); Jones, supra note 45, at 122 (“What is the character of the concessions which will be considered an equivalent is to be left entirely to the treaty-making powers of the respective states. The mutual concessions are ‘to be honourably determined by the governments concerned.’ ”); Viner, supra note 6, at 122 (“The grantor of concession to one country for compensation is itself the judge of the equivalent compensation offered for the same concessions by other countries. If it does not wish to extend its concession to third countries, it need only deny the equivalence of the compensation offered.”).

\textsuperscript{47} See, for example, the statement made by John Jay to Congress in 1787, that

[w]here a privilege is gratuitously granted, the nation to whom it is granted becomes in respect to that privilege a favored nation ... but where the privilege is
that MFN clauses were intended to eliminate. More realistically, of course, the true explanation for the United States’ adoption of this policy is likely found in the power the policy gave it to decide for itself when it would and would not give MFN treatment.

Contrary to any understanding of MFN clauses of this period as reflecting a commitment to nondiscrimination, European states had no objection in principle to conditional MFN clauses. Indeed, although it was the United States that came to be identified with the use of the conditional MFN clause, it was in fact France that had initially proposed to the United States not gratuitous, but rests on compact, in such case the favor, if any there be, does not consist in the privilege yielded, but in the consent to make the contract by which it is yielded. . . . The favor, therefore, of being admitted to make a similar bargain, is all that in such cases can reasonably be demanded under the article.

Viner, supra note 6, at 104 (citing Samuel B. Crandall, Treaties, Their Making and Enforcement 404–05 (2d ed. 1916)); see also Hornbeck, supra note 6, at 408 (“The United States argued for a more specific equivalent, saying that if they were to give France freely that for which England had paid, France would be enjoying a treatment more favored that [sic] that of the most-favored nation.”).

48. In the words of the U.S. Minister to Argentina in 1897:

It is clearly evident that the object sought in all the varying forms of expression [of MFN clauses] is equality of international treatment, protection against the willful preference of the commercial interests of one nation over another. But the allowance of the same privileges and the same sacrifice of revenue duties to a nation which makes no compensation that had been conceded to another nation for an adequate compensation instead of maintaining destroys that equality, which the ‘most favored nation’ clause was intended to secure.

Jones, supra note 45, at 123 (citing 5 John Bassett Moore, A Digest of International Law 278 (1906)).

49. See, e.g., Henri Hauser, The Most-Favored-Nation Clause: A Menace to World Peace, 156 Annals Am. Acad. Pol. & Soc. Sci. 101, 103 (1931) (“[T]he United States maintains that the rule of reciprocity does not preclude the granting of special favors to contiguous states, i.e. to Canada and Mexico, nor does it prevent the United States from granting whatever privileges it desires to its ‘protectorates’ in the Caribbean.”).

50. See Schill, supra note 9, at 511 (noting that conditional MFN clauses “prevailed in Europe until 1860”). This is not to say, however, that the Europeans did not have objections to the way in which they were used by the United States. One commentator, for instance, notes that

European countries, irritated by the repeated refusals of the United States to acknowledge obligations under its most-favored-nation pledges and by the extraordinary heights to which American protectionism was carrying import duties on European products, began to denounce their most-favored-nation treaties with the United States, to consent to new tariff arrangements only on a temporary basis, and openly and otherwise to discriminate in their customs legislation against American products.

Viner, supra note 6, at 126–27.

51. See Pomfret, supra note 35, at 18 (“The sole important practitioner of conditional MFN treatment was the United States.”); Hornbeck, supra note 6, at 405–06 (“This form appears in most of the treaties of the United States . . . [T]he special limiting clause which expresses the American idea and forms the basis of the American interpretation was first
that a conditional MFN clause be adopted for their 1778 treaty.\textsuperscript{52} Consequently, it is unsurprising that for a short period the conditional clause became the norm even within Europe.\textsuperscript{53}

Nonetheless, in reality, the United States was the only state that truly benefited from conditional MFN treatment, with the conditional MFN clauses adopted by European states ultimately having the same substantive effect as unconditional clauses.\textsuperscript{54} While the inability of European states to benefit from conditional MFN clauses is partly explained by the relatively few instances of more favorable treatment being given within Europe at that time, a more fundamental obstacle arose from the fact that all the major trading nations other than the United States were already enmeshed in an extensive network of unconditional MFN clauses when they began adopting conditional clauses. The problem this created is that a single unconditional MFN clause will completely undermine the operation of a conditional MFN clause.\textsuperscript{55}

By way of example, presume that Germany signs a series of treaties incorporating conditional MFN clauses. As a result of these clauses, if Germany provides a benefit to, for example, Italy, then that same benefit must also be provided to those states benefiting from applicable MFN clauses, \textit{upon payment} of the same compensation originally paid by Italy. As a result, Germany gains benefits that it would not have gained had its MFN clauses been unconditional.

However, if Germany also has in place a treaty with Finland that includes an unconditional MFN clause, then Finland has the right to receive the benefit in question without paying any compensation. The difficulty this creates for Germany is that while it initially provided the benefit to Italy for a cost, it has now provided the same benefit to Finland for free. Consequently, inserted in treaties made by the United States.

Other countries have also made significant use of the conditional MFN clause. See, e.g., Comm. of Experts, supra note 30, at 137 (noting the use of the conditional MFN clause in Latin America). For excellent coverage of Japan’s practice with regard to the MFN clause, see generally Shinya Murase, \textit{The Most-Favored-Nation Treatment in Japan’s Treaty Practice During the Period 1854–1905}, 70 \textit{Am. J. Int’l L.} 273 (1976).

\textsuperscript{52} See generally Vernon G. Setser, \textit{Did Americans Originate the Conditional Most-Favored-Nation Clause?}, 5 \textit{J. Mod. Hist.} 319 (1933) (presenting the evidence supporting the view that the conditional MFN clause in the treaty was originally proposed by France, not the United States); Pahre, supra note 36, at 873 (noting that France wanted a conditional MFN clause in the Franco-American commercial convention in order “to keep Britain isolated from the rest of Europe” and “avoid the suggestion that it was fighting a war of aggrandizement”).

\textsuperscript{53} Schill, supra note 9, at 511 (noting that the conditional MFN clause “also prevailed in Europe until 1860”).

\textsuperscript{54} Pomfret, supra note 35, at 17 (“In Europe the conditional form was often used between 1820 and 1860, but was similar in effect to unconditional MFN treatment because of the prevalence of single-schedule tariffs and rarity of special concessions.”).

\textsuperscript{55} Id. (noting that “a single treaty with an unconditional clause rendered inoperative any conditionality in MFN clauses of treaties involving the same countries”); see also Schwarzenberger, supra note 6, at 102; Viner, supra note 6, at 119.
ly, all the states with which Germany has applicable conditional MFN clauses can also claim the benefit for free, this being the compensation paid by Finland.

Because of the effect unconditional MFN clauses have on conditional clauses, a state that has signed even a single unconditional MFN clause will gain no benefit from negotiating conditional MFN clauses. Only the fact that the United States was a new state entering into its first round of treaties allowed it successfully to adopt conditional MFN clauses, and only a continued insistence on this policy allowed them to remain effective.\textsuperscript{56} Indeed, the one time that the United States was forced to admit that an MFN clause to which it had agreed was unconditional, it terminated the treaty as soon as the first claim was made under it.\textsuperscript{57}

While European states were ultimately prevented from following the American policy of conditional MFN clauses, however, they were still able to approach unconditional MFN clauses tactically.\textsuperscript{58} For example, although unable to insist on compensation for the provision of benefits through an MFN clause, European states would at times grant tariff reductions crafted to apply to a very specific type of product.\textsuperscript{59} They would then argue that the reduction in question was not given in violation of any applicable MFN clause, as any state could meet the criteria in question, even though only one happened to do it currently.\textsuperscript{60} Similarly, in 1891 Austria and Germany kept

\textsuperscript{56} Notably, it was not just the treaty-making powers of the United States that underwrote the consistency of the U.S. adoption of the conditional MFN clause. The U.S. Supreme Court also interpreted ambiguously drafted MFN clauses in treaties as constituting conditional forms of the clause. \textit{See, e.g.}, Whitney v. Robertson, 124 U.S. 190, 192–93 (1888).

\textsuperscript{57} Pomfret, supra note 35, at 18.

\textsuperscript{58} \textit{See, e.g.}, Olivier Accominotti & Marc Flandreau, \textit{Bilateral Treaties and the Most-Favored-Nation Clause: The Myth of Trade Liberalization in the Nineteenth Century}, 60 \textit{World Pol.} 147, 150 (2008) ("British negotiators felt that MFN would enable Britain to rely on France to make concessions to third parties; and Britain in turn would benefit without making further concessions itself."); Hauser, supra note 49, at 101 (describing the incorporation of an MFN clause into a Franco-German treaty as having "a purely protectionist origin"); Jones, supra note 45, at 126 (noting England's endorsement of the view that imposing higher tariffs on imports subsidized by a foreign government did not violate MFN clauses, as it merely eliminated a form of competitive discrimination introduced by the foreign government in question); Pahre, supra note 36, at 867 (noting that in 1881 Britain terminated renegotiation of a treaty with France because France had refused to give Britain the tariff reductions it sought, and Britain hoped to gain the same reductions automatically through the application of an MFN clause in the British-French treaty to a French-Belgian treaty that was under negotiation).

\textsuperscript{59} \textit{See, for example}, the "Swiss Cow" case, in which Germany granted a tariff reduction for cows raised above a certain elevation, even if there was no other difference between the cows in question. \textit{Draft Articles}, supra note 29, at 31–32. This allowed Germany to provide benefits to Switzerland while not extending them to Denmark. \textit{Id.}

\textsuperscript{60} Comm. of Experts, supra note 30, at 143–44 ("In order to be able to confer a favour upon certain selected districts or persons, or respecting particular objects, without extending it to all States with which the favouring nation has treaties containing most-favoured-nation clauses, resort is sometimes had to conditions or limitations imposed upon the favour, which those whom it is designed to benefit will meet but which will exclude
tariff reductions they had negotiated with one another secret until further treaties had been concluded with third-party states. This secrecy allowed them to negotiate compensation via treaty for reducing tariffs to these third-party states, even though the states in question would have been entitled to receive the same reductions without compensation through applicable MFN clauses.  

More generally, European states would attend closely to the order in which they negotiated treaties as a means of controlling the benefits that they would gain or give through any applicable MFN clauses.

As a result of such practices, by the end of the nineteenth century the MFN clause had largely fallen out of favor with states. Indeed, hostility to the MFN clause was so strong in France that all its treaties containing MFN clauses were denounced, and a law was passed forbidding the French government from entering into any future treaties containing MFN clauses.

But this hostility to the MFN clause was relatively short lived, and MFN clauses regained their popularity in the period between the two World Wars. Indeed, in 1923 even the United States came to endorse the unconditional form of the MFN clause. Notably, though, this was not because of a newfound appreciation of the benefits of multilateral nondiscrimination, but because the United States’ continued use of conditional MFN clauses had become counterproductive in the face of the hostility of its trading partners. As a result, a practice of bilateral, prospective, general, and
unconditional MFN clauses began and has remained the dominant approach to the present day.\(^{68}\)

As the above discussion has shown, MFN clauses have simply never been the generalized nondiscrimination provisions that some contemporary commentators have portrayed them as being. They were originally developed as a means of gaining specific advantages already offered to specific third states, and, even when the generalized form of MFN treatment became dominant, the clause was used tactically as a means of ensuring market benefits rather than as a principled means of promoting multilateral nondiscrimination.

The above discussion, however, has almost exclusively focused on the application of MFN clauses to tariff barriers, as until very recently this was almost their exclusive role.\(^{69}\) With the rise to importance of international investment law, however, MFN clauses have moved into a very different context: one that is particularly problematic for the teleological nondiscrimination interpretation of their operation. As the following Part of the Article will emphasize, international investment law by its nature has far greater effects upon state action than does the mere setting of tariff levels for imported products. Consequently, failing to recognize the appropriate limits on the operation of MFN clauses within international investment law, and interpreting them solely in accordance with predetermined teleological goals, risks seriously impacting the appropriate regulatory activities of states.

II. MFN CLAUSES AND BILATERAL INVESTMENT TREATIES

While the previous Part addressed the development of MFN clauses in international agreements, no attention has yet been given to their specific role within international investment law. Indeed, the exclusive focus on the use of MFN clauses in international trade characterizes most commentary on the topic, for the simple reason that tariff reduction was traditionally the almost-exclusive context in which such clauses were used.\(^{70}\)

The growth of international investment law in the second half of the twentieth century, however, has created a new field in which MFN clauses

\(^{68}\) See Comm. of Experts, supra note 30, at 137 (asserting that "[t]he unconditional form is practically universal now").

\(^{69}\) Conroy, supra note 25, at 329 ("[T]he most favored nation clause is a sort of residual clause covering all favors not otherwise provided for; but the chief purpose in practice, and the only purpose of any importance, is to govern tariff relations.").

\(^{70}\) Id. (noting that ninety-five percent of claims made under MFN clauses are for tariff reductions). However, there was some early recognition that MFN clauses would ultimately come to have importance within the field of foreign investment. See, e.g., Wright, supra note 20, at 761 ("It thus seems probable that as opportunities for foreign investment by their nationals become a more important interest of states, they will make efforts to assure most-favored-nation treatment in this regard.").
have just as central a role as in the regulation of tariffs. Since a treaty will usually take years to renegotiate, a state with an investment treaty that does not include an MFN clause risks shackling its investors to an agreement that has since been superseded by more favorable agreements negotiated with other states.

Of course, as the obligation to provide MFN treatment only arises from treaties, it was not until international investment law came to be dominated by treaties that MFN clauses achieved their current importance within the field. Traditionally, international investors had been protected through the operation of customary international law, which contained restrictions limiting the freedom of Host States in their treatment of foreign investors. The effectiveness of this law, however, depended to a significant degree upon the identity that initially existed between those states serving as the sources of foreign investment and those serving as the recipients. That is, because states receiving foreign investments also had citizens and corporations of their own investing in other countries, each state actively participating in international investment had an interest in agreeing to at least minimal protections of foreign investors.

Moreover, even where a developing state was the recipient of foreign investment, the activities of the investors in question were often governed by the developed state from which the investors came, rather than the developing state in which they were investing. This was because the vastly superior bargaining power of capital-exporting states allowed them to insist upon consular jurisdiction treaties, in accordance with which nationals of a developed state would remain under its sole jurisdiction even when operating in a developing state. Consequently, the investor-friendly policies of developed

UNCTAD, supra note 11, at 1 ("The most-favoured-nation treatment (MFN) standard is a core element of international investment agreements."); Gabriel Egli, Don't Get Bit: Addressing ICSID's Inconsistent Application of Most-Favored-Nation Clauses to Dispute Resolution Provisions, 34 Pepp. L. Rev. 1045, 1065 (2007) (noting that MFN clauses have increasingly become a common feature of international investment policy); Houde, supra note 6, at 158 (referring to the prevalent use of MFN clauses in investment treaties); Eduard Kunstek, Procedural Effects of BITs' Most Favoured Nation Clauses on ICSID Arbitration, 15 Croatian Arb. Y.B. 97, 98 (2008) (noting that almost all bilateral investment treaties contain MFN clauses).

72. See Houde, supra note 6, at 142 n.36 ("[The MFN clause] contributes greatly to the rationalization of the treaty-making process and leads to the automatic self-revision of treaties which are based on the most-favoured-nation standard." (quoting 1 Georg Schwarzenberger, International Law as Applied by International Courts and Tribunals 243 (1957))).

73. Host State is used in this Article to refer to the state in which a foreign investment is made.

74. Andrew Newcombe & Lluis Paradell, Law and Practice of Investment Treaties 11 (2009) ("By the early 1900s, there was general agreement amongst international lawyers in Europe and the US that there existed a minimum standard of justice in the treatment of foreigners.").

75. Sutton, supra note 8, at 119 ("Many states entered into treaties (sometimes called 'capitulations') with Asian and African states as the result of which subjects, when entering
states would apply even where the Host State in question applied fundamentally different rules to its own investors.

However, the growth of genuinely global business in the twentieth century, the rise to influence of socialist thought, and the wave of decolonization that occurred immediately after World War II combined to produce the collapse of the largely pro-investor consensus that had long underwritten the customary law on the protection of international investments.\footnote{Andrew T. Guzman, Why LDCs Sign Treaties that Hurt Them: Explaining the Popularity of Bilateral Investment Treaties, 38 Va. J. Int'l L. 639, 641 (1998) ("In the years that followed World War II, however, developing countries questioned the Hull Rule, claiming the right to determine how they would treat investors and the standard of compensation that should apply if that treatment was sufficiently harmful. This challenge to the Hull Rule proved successful, and by the mid 1970s (and perhaps sooner), the Hull Rule had ceased to be a rule of customary international law.")} The decades immediately after World War II, therefore, saw a series of actions taken by a variety of states, particularly those newly independent from colonial powers, that would previously have been regarded as inconsistent with international law.\footnote{NEWCOMBE \\& PARADELL, supra note 74, at 18–19 ("Disputes over the treatment of foreign investment increased and intensified after WWII as the process of decolonization resulted in colonial territories becoming states. Many of these newly independent states, along with the Eastern European communist states, adopted socialist economic policies, including large scale nationalizations of key sectors of their economies.").}

It was against this background that, from the late 1950s, states wishing to ensure protection for their citizens investing abroad ceased relying primarily upon customary international law and turned instead to the signing of Bilateral Investment Treaties (BITs).\footnote{RUDOLF DOLZER \\& MARGRETE STEVENS, BILATERAL INVESTMENT TREATIES 10–11 (1995). The first ever BIT was concluded between Germany and Pakistan on 25 November 1959. UNCTAD, The Entry into Force of Bilateral Investment Treaties (BITs), IIA MONITOR, no. 3, 2006 at 3, U.N. Doc. UNCTAD/WEB/ITE/IIA/2006/9. For a short but useful account of the historical development of the contemporary BIT regime, see Egli, supra note 71, at 1048–53.} While BITs generally act as a supplement to customary international law, rather than as a replacement for it, investors operating under the protection of a BIT need not rely on the vague and elementary protections offered by customary international law and can instead point to specific promises made by the Host State regarding the treatment they will receive.\footnote{Antonio R. Parra, Applicable Law in Investor-State Arbitration, in CONTEMPORARY ISSUES IN INTERNATIONAL ARBITRATION AND MEDIATION 7 (Arthur W. Rovine ed., 2008) ("Nowadays, almost all of the ICSID Convention cases that are being initiated concern such treaty claims. The tribunals have, in these newer cases, all applied to the merits of the disputes the provisions of the underlying treaties, as well as general international law rules.")} In addition, if the BIT includes consent to direct investor-state arbitration for any alleged violation of its terms (as is now standard), investors have the additional certainty that the rights granted in the BIT can indeed be enforced, even against an
This system of BITs has proven so effective that there are now over 2000 BITs in force, enshrining individualized agreements regarding investor protection between countries from all corners of the world, representing all levels of economic development.

Nonetheless, while the innovation of BITs gave any two states the ability to tailor promised investment protections to the specific relationship existing between them, it also created yet another forum in which states could compete for advantage. After all, as the goal of a BIT is to encourage foreign private investment, it cannot achieve its purpose unless foreign investors know of both its existence and its contents. Consequently, BITs are routinely widely publicized and publicly available. The consequence of this publicity is that each BIT negotiation is conducted with both states fully aware of the terms of the other BITs that its potential treaty partner has already signed. Any state negotiating a BIT will, therefore, do so with full knowledge of what it must do in order to ensure that its investors are treated at least as well as, and ideally better than, those of any third state.

The high level of publicity attached to BITs, therefore, largely eliminates their usefulness as a means of securing already-existing treatment, as such treatment can easily be identified and specifically requested. However, it makes their role as protector against more favorable future agreements even more important, as the public availability of the contents of a BIT will ensure that states negotiating future agreements with either

80. Joshua Boone, How Developing Countries Can Adapt Current Bilateral Investment Treaties to Provide Benefits to Their Domestic Economies, 1 GLOBAL BUS. L. REV. 187, 190 (2011) ("[A]lmost all of these treaties provide ADR provisions that allow states to bring claims regarding the interpretation or application of a treaty provision as well as allow investors to bring claims against states for treaty violations, often referred to as investor-State Arbitration."); Susan D. Franck, The Nature and Enforcement of Investor Rights Under Investment Treaties: Do Investment Treaties Have a Bright Future?, 12 U.C. DAVIS J. INT’L L. & POL’Y 47, 53-54 (2005) ("BITs also provide procedural rights that permit the enforcement of the substantive rights .... [I]nvestors can directly bring a claim against a Sovereign for violation of a treaty, functioning in a manner similar to private attorneys general in the protection of the public interest.").

82. It should be emphasized, however, that this statement does not mean that encouraging foreign investment is the only purpose of BITs, or that it means the purpose of a BIT is to encourage foreign investment of any type under any circumstances. Such an expansive interpretation of the object and purpose of BITs would lead to precisely the type of teleological reasoning criticized in this Article with respect to the interpretation of MFN clauses.

84. Of course, it is always possible that a particularly incompetent treaty-negotiating team will not be aware of the investment treaties already signed by the state with which they are negotiating. But given the easy accessibility of such information, it would be unreasonable to presume such ignorance absent clear evidence.
state party to the original BIT will attempt to achieve more favorable terms than the original BIT included. Consequently, it is unsurprising that BITs characteristically include MFN clauses.

MFN clauses in BITs, however, are of a particularly voracious variety. Although in some treaties they will be restricted in their operation to a particular article, overwhelmingly MFN clauses in BITs are generalized promises of MFN treatment with respect to all areas addressed by the BIT, modified sometimes by certain limited carve outs.

The difficulty caused by this generality of MFN clauses in BITs is that contemporary international investment agreements address an enormously wide variety of potential government actions and are framed in very broad and vague language. Consequently, there are few, if any, areas of governmental regulation that can be said to be beyond the reach of a contemporary BIT. As a result, while the traditional promise of MFN treatment with respect to tariffs only constrained governmental action in a very narrow field, a generalized MFN clause in a BIT can potentially be applicable to any action taken by a government that affects a foreign investor. In their move

---

85. This does not mean, of course, that there will be no natural limits on the favorability of treatment included in a BIT. After all, if the BIT imposes equivalent obligations on both states party to it, then one state may be willing to accept less favorable treatment than is already being received by another state, simply because it is itself unwilling to grant that more favorable treatment.

86. See UNCTAD, supra note 11, at 13 ("With regard to investment, the development of MFN became common in the 1950s with the conclusion of international investment agreements, including BITs. The MFN standard was included in such treaties from the beginning ...."); Houde, supra note 6, at 130 ("The inclusion of MFN clauses became a general practice in the numerous bilateral, regional and multilateral investment-related agreements which were concluded after the [Havana] Charter failed to come into force in 1950.").

87. UNCTAD, supra note 11, at 2 (noting that exceptions in MFN clauses in international investment agreements are usually only applied in "explicitly-recognized" policy areas such as taxation and intellectual property); Pia Accconi, Most-Favoured-Nation Treatment, in THE OXFORD HANDBOOK OF INTERNATIONAL INVESTMENT LAW 368-69 (Peter Muchlinski et al. eds., 2008) (noting that generally, MFNs in investment treaties are "unrestricted" and "unlimited ratione materiae, ratione personae, and ratione temporis," but that in some treaties there are exceptions and reservations).

88. See UNCTAD, supra note 11, at 4 ("MFN applies both in the trade and the investment fields. However, contrary to trade, where the MFN standard only applies to measures at the border, there are many more possibilities to discriminate against foreign investment.").

89. Gus Van Harten & Martin Loughlin, Investment Treaty Arbitration as a Species of Global Administrative Law, 17 EUR. J. INT’L L. 121, 146 (2006) (arguing that the substantive impact of BITs on a state’s traditional regulatory activities is so broad that investment arbitration can properly be characterized as a form of administrative review of state action).

90. Moreover, there is clear empirical evidence that widespread application of MFN clauses to tariff schedules provides benefits to countries of all sizes and economic power. See, e.g., Kamal Saggi, The MFN Clause, Welfare, and Multilateral Cooperation Between Countries of Unequal Size, 88 J. DEV. ECON. 132, 132–33 (2009); see also Madanmohan Ghosh et al., Developing-Country Benefits from MFN Relative to Regional / Bilateral Trade Arrangements, 11 REV. INT’L ECON. 712, 726 (2003) ("[S]mall countries are better off under the MFN as it does not allow bilateral bargaining."); Kamal Saggi & Frank Sengul, On the
from the world of trade and tariffs to the protection of international investments, MFN clauses have gained the power to impact significantly upon the broad policy-making freedom of states.91

The importance of MFN clauses has, of course, long been clear, and attempts to standardize the interpretation of MFN clauses by means of international agreements have already twice been undertaken. In the 1920s, the forerunner of the International Law Commission (ILC), the Committee of Experts for the Progressive Codification of International Law, undertook the first examination of the possibility of a multilateral convention on the operation of MFN clauses.92 Ultimately, however, the Committee concluded that “international regulation of these questions by way of a general convention, even if desirable, would encounter serious obstacles” and, consequently, decided not to proceed.93 Similarly, the ILC itself addressed the operation of MFN clauses in a project commenced in 1967,94 resulting in the 1978 Draft Articles on Most-Favored-Nation Clauses.95 However, despite several attempts to develop these draft articles into a multilateral treaty, no formal action was taken, and again the idea of a treaty on the operation of MFN clauses was ultimately abandoned.96

While the work of both these committees is certainly important, in neither case did the work explicitly discuss the role of MFN clauses in international investment agreements, instead focusing primarily on their role

95. Draft Articles, supra note 29, at 16; see also Houde, supra note 6, at 139 (“In 1978, the ILC adopted the Draft Articles on Most-Favoured-Nation Clauses and recommended to the General Assembly of the United Nations that they be used for a Convention on the subject.”).

96. Houde, supra note 6, at 139 (“The General Assembly did not act upon this recommendation and took no substantive action on the draft articles.”); see also Stephen Zamora, International Relations and Development, in THE UNITED NATIONS AND INTERNATIONAL LAW 232, 239 (Christopher C. Joyner ed., 1997).
in international trade.\footnote{Houde, supra note 6, at 139 ("In determining to proceed with the project, the ILC acknowledged the importance of the role of the most-favoured-nation treatment obligation in the sphere of international trade.").} This was an understandable emphasis, as international investment law did not attain its current position of importance until after the ILC had concluded its work.\footnote{See Newcombe \& Paradell, supra note 74, at 47 ("The end of the 1980s and the 1990s witnessed an exponential growth in the conclusion of international investment and trade treaties. BITs quintupled during the 1990s.")} Nonetheless, the significantly different context provided by international investment law limits the usefulness of the work produced by these two committees for the interpretation of MFN clauses in BITs. Indeed, it was in recognition of the new importance of international investment law, and the importantly different context it provides for MFN clauses, that the ILC decided in 2008 to resume its work on MFN clauses, with particular consideration given to their operation in international investment agreements.\footnote{Rep. of the Int'l Law Comm'n, 61st Sess., May 4–June 5, July 7–Aug. 7, 2009, ¶¶ 208, 211–212, 216, U.N. Doc. A/64/10; GAOR, 64th Sess., Supp. No. 10 (2009). The centrality of the impact of MFN clauses on dispute resolution in investment arbitration is made clear through the ILC's research program's incorporation of the topic of "The Maffezini Problem under Investment Treaties," under the supervision of co-rapporteur Rohan Perera. Id. ¶ 216.}

Up to this point, the Article has argued that the teleological nondiscrimination interpretation of MFN clauses is both inconsistent with the reality of the MFN clause's history, and potentially enormously problematic when imported into international investment law. Nothing has yet been said, however, regarding the boundaries within which MFN clauses should be understood to operate in international investment law. The remainder of this Article will be dedicated to clarifying these limits. Part III of the Article will focus upon the limitations on the functioning of MFN clauses that have already been recognized by tribunals applying public international law. The decisions of these tribunals have been recognized as also applicable within international investment law, and thus provide the already-existing limitations on the teleological interpretation of MFN clauses that currently dominates the field. Part IV of the Article will then advance an original analysis of the limitations that must be recognized on MFN clauses specifically within international investment law.

III. THE BOUNDARIES OF MFN CLAUSES AS RECOGNIZED BY INTERNATIONAL TRIBUNALS

Although there were relatively few decisions by international tribunals regarding the operation of MFN clauses prior to the investment arbitration decisions of the late twentieth century, three decisions from this earlier period are foundational for any understanding of the boundaries of MFN clauses. The importance of these decisions lies not just in the temporal
priority they have over all later decisions, but in the approach they took to resolving the MFN-based questions they faced. In each decision, the tribunal in question rejected a broad teleological approach to the interpretation of MFN clauses and instead recognized a specific limitation within which MFN clauses must be seen as operating in international law. As a result, the decisions of these tribunals provide three essential elements for any subsequent discussion of the boundaries of MFN clauses in international investment law.

A. Anglo-Iranian Oil: The Treaty-Boundedness of MFN Clauses

One of the great risks of an MFN clause, the precise purpose of which is to allow a party to an agreement to receive treatment not actually promised in that agreement, is that it will be read as operating in an almost unconstrained fashion. Since an MFN clause constitutes a promise not to treat any third party more favorably, an unrestricted MFN clause might be taken to apply to any more favorable treatment given to a third party, with few limitations deriving from the context in which that treatment occurs. As a result, an already enormously powerful clause would potentially be transformed into a replacement for the treaty itself, gathering any more favorable treatment offered to any third party while avoiding any restrictions.

One element of this problem was addressed by the International Court of Justice (ICJ) in its decision in the Anglo-Iranian Oil Company case of 1952.100 The dispute arose out of the nationalization of the Iranian oil industry, and the consequent losses suffered by the U.K.-based Anglo-Iranian Oil Company.101 For the losses suffered by the company during the nationalization, the United Kingdom was seeking compensation from Iran under treaties concluded between the United Kingdom and Iran in 1857 and 1903.102

The question faced by the ICJ, however, was not the substantive question regarding the obligation of Iran to pay compensation, but rather whether it had jurisdiction even to hear the United Kingdom's claim.103 Under Article 36 of the Statute of the ICJ, the Court's jurisdiction can be established in two ways.104 First, both parties to the dispute can consent to

102. Id. at 97–98.
103. Id. at 95–96.
the case being heard at the ICJ.而是伊朗拒绝了其同意，因此英国没有依赖这一基础来确立管辖权。

相反，英国试图依赖第二个ICJ管辖权基础，即其“强制管辖权”。

根据这一方法，各国可以向联合国秘书长声明其愿意由ICJ处理的争端类型。一旦声明，无需进一步的同意即可使ICJ在具体案件中拥有管辖权。由于伊朗确实同意了ICJ的强制管辖权，如果英国能够证明其索赔属于这一同意的范围，那么即使伊朗不愿意同意由ICJ审理这场英伊朗纠纷，ICJ也会拥有管辖权。

英国遇到的复杂情况是，1930年伊朗同意的ICJ强制管辖权声明，仅限于1930年之后签订的条约所引发的争端。因此，由于英国基于1857年和1903年条约的争端，ICJ初步地没有强制管辖权。因此，为避免障碍，英国提出的一个论点是，ICJ的访问权比基本条约中提供的争端解决机制更为有利。因此，由于伊朗同意其他国家可以向ICJ提出索赔，这些国家比英国受到了更为有利的待遇，因此基本条约中的MFN条款要求让英国也能向ICJ提出其案件。

如果接受英国的实质性论点，即ICJ的访问权比基本条约中的争端解决机制更为有利，那么这个论点当然有表面上的合理性。然而，这被ICJ拒绝了。重要的是，这并不是基于ICJ的管辖权比基本条约中的程序更有利于英国的事实，而是基于该论点不成立。

105. ICJ Statute, supra note 104, art. 36(1).

Treaties. Instead, the Court emphasized that whatever impact an MFN clause might have on the provisions of the treaty within which it is contained, it simply cannot alter the terms of any other treaty. That is, the operation of an MFN clause is restricted to the treaty in which it is contained. On one level this is an obvious conclusion, fully in line with the traditional doctrine of res inter alios acta. However, its importance for the purposes of interpreting MFN clauses is clarified by the fact that this rule can, as it arguably did in this case, result in the beneficiary of an MFN clause not actually receiving more favorable treatment to which it is unquestionably entitled through the MFN clause.

As emphasized by the ICJ, the restriction on Iran’s consent to the ICJ’s compulsory jurisdiction that the United Kingdom was attempting to remove was not included within either of the Basic Treaties. Instead, it was included in a completely separate document. Consequently, since the operation of the MFN clauses in the Basic Treaties was restricted to the Basic Treaties themselves, they could not remove the restriction on Iran’s consent to the ICJ’s compulsory jurisdiction.

It simply did not matter, therefore, for the purposes of the ICJ’s jurisdiction, whether access to the ICJ constituted more favorable treatment than Iran was providing to any third state, and hence whether the United Kingdom had a treaty-based right to bring its claim before the ICJ. The United Kingdom may indeed have possessed this right, but it simply was not a right that the ICJ had the jurisdiction to vindicate.

It is thus simply inaccurate to categorize the Anglo-Iranian Oil Company decision as constituting a rejection of the view that MFN clauses can apply to dispute resolution procedures, as some commentators have done. The ICJ simply never addressed this point.

By drawing this distinction between the existence of a right to more favorable treatment and the jurisdiction of a tribunal to determine whether that right exists, the ICJ thus recognized an important constraint on the operation of MFN clauses. Mere invocation of an MFN clause does not gain the beneficiary all more favorable treatment currently being provided to third states, as would a general nondiscrimination clause. Unless that treatment can in some way be incorporated into the treaty in which the MFN clause is con-

tained, it is simply unavailable to the beneficiary of the MFN clause, whether it is indeed more favorable or not.\textsuperscript{120}

B. Rights of Nationals of the United States of America in Morocco: The Temporality of MFN Clauses

Only one month later, in \textit{Rights of Nationals of the United States of America in Morocco},\textsuperscript{121} the ICJ recognized a further important limitation on the operation of MFN clauses with respect to their essential temporality. The case concerned a disagreement between the United States and France regarding the extent of U.S. consular jurisdiction in Morocco,\textsuperscript{122} at that time under the control of France.\textsuperscript{123} While France contended that U.S. consular jurisdiction only extended to civil disputes, the United States argued that it also extended to criminal disputes.\textsuperscript{124} As one of its arguments, the United States attempted to invoke an MFN clause included in an agreement between itself and Morocco in an attempt to gain access to broad grants of consular jurisdiction included in treaties concluded by France with Spain and with the United Kingdom.\textsuperscript{125}

The difficulty for the United States was that even if it was accepted that the grants of broader consular jurisdiction to Spain and the United Kingdom did indeed constitute more favorable treatment than that given to the United States, the treaties delivering that treatment were no longer in effect.\textsuperscript{126} The United States, therefore, was not attempting to argue merely that an MFN clause gains the beneficiary state any more favorable treatment given to third states, but that once a state gains a certain form of treatment via an MFN clause, it retains that treatment even if the third state in question ceases to receive it. As phrased by the United States, MFN provisions should be understood as a means of drafting by reference, with incorporated treatment

\begin{footnotes}
\item[120] One final important point regarding this case is worth noting, as it is far from clear that the ICJ did not actually have jurisdiction over the United Kingdom’s claim through the operation of the MFN clauses in the Basic Treaties. Fatally for its claim, the United Kingdom had attempted to rely upon Iran’s consent to the compulsory jurisdiction of the ICJ. Had the United Kingdom attempted instead to bring its claim under the consensual jurisdiction of the ICJ, alleging that the MFN clauses in the Basic Treaties incorporated Iranian consent to the jurisdiction of the ICJ, the court’s argument rejecting jurisdiction would not have been applicable. The ICJ may, as a result, have upheld its jurisdiction over the United Kingdom’s claim.

retained as though there were explicit language in the treaty requiring that it be given.\(^{127}\)

While such an argument might have had some strength at a time when MFN clauses were understood to operate purely retrospectively, incorporating only treatment already given to third states when the MFN clause came into effect, the ICJ appropriately rejected it in the contemporary context of prospective MFN clauses.\(^{128}\) Instead, the court emphasized in its decision that rather than being a form of incorporation by reference, contemporary MFN clauses are properly understood as a means of ensuring equality between the state beneficiary of the MFN clause and the third state receiving the more favorable treatment in question.\(^{129}\) However, to allow the United States to retain the arguably more favorable treatment even after it was withdrawn from Spain and the United Kingdom would actually privilege the United States over its competitors, a goal inconsistent with the purpose of a contemporary MFN clause.

In this ruling, then, the ICJ further reiterated that MFN clauses are not an unrestricted means of states gaining the best form of treatment possible. Rather, they operate not only within the limits of the treaty in which they are contained, but also within the temporal limitations of the treatment being sought. MFN clauses, that is, have their effect on an ongoing basis. Treatment is not incorporated once and then forever maintained. It is instead incorporated anew at each moment the more favorable treatment is available to the third state. Consequently, once the more favorable treatment is withdrawn from the third state, it is no longer available to be incorporated via the MFN clause and is therefore lost to the beneficiary of the clause as well.

### C. The Ambatielos Arbitration: Ejusdem Generis

One final limitation that has been recognized by international tribunals addresses the risk created by the impact on the operation of MFN clauses of the broad range of issues about which states enter into international agreements. A state may, for example, be willing to subject itself to binding

\(^{127}\) Id. at 191. Even today, it is indeed quite common for MFN clauses to be described as functioning via a form of “incorporation by reference.” See, e.g., Plama Consortium Limited v. Republic of Bulgaria, ICSID Case No. ARB/03/24, Decision on Jurisdiction, ¶ 229 (Feb. 8, 2005). However, contemporary uses of this phrase do not contradict the ICJ’s view that incorporation ends once the more favorable treatment is no longer provided to the third state, but instead merely express the view that MFN clauses incorporate by reference presently-existing treatment. Nonetheless, as Douglas has argued, even contemporary uses of the phrase “incorporation by reference” are troubled, as they simply do not accurately describe the manner in which MFN clauses work. Douglas, supra note 20, at 105–08.

\(^{128}\) In 1928, the Committee of Experts for the Progressive Codification of International Law noted that there was “a difference of opinion” as to whether a benefit gained via an MFN clause terminates once the more favorable treatment is no longer provided to the third state, but instead merely express the view that MFN clauses incorporate by reference presently-existing treatment. Nonetheless, as Douglas has argued, even contemporary uses of the phrase “incorporation by reference” are troubled, as they simply do not accurately describe the manner in which MFN clauses work. Comm. of Experts, supra note 30, at 140. However, in line with the ICJ’s decision in this case, the rapporteur concluded that the benefit should indeed be understood to terminate when the treatment on which it is based terminates. Id.

\(^{129}\) Rights of Nationals of the United States, 1952 I.C.J. at 192.
dispute resolution in the field of human rights, while remaining completely unwilling to do so where purely economic claims are brought. However, if the state has included an MFN clause within an economic treaty it has signed, the beneficiary of that clause may argue that states signatory to the human rights treaty are receiving more favorable treatment due to the availability of binding dispute resolution. Unrestricted interpretations of general MFN clauses, then, create the risk that states will find themselves obligated to extend benefits willingly granted in one area of law into a completely different area of law from which they may have been expressly excluded.

While the situation as just described was not itself faced by the tribunal in the *Ambatielos* arbitration, the *ejusdem generis* principle that the tribunal enunciated has served to resolve this risk. By virtue of this principle, an MFN clause “can only attract matters belonging to the same category of subject as that to which the clause itself relates.” The *Ambatielos* arbitration concerned a claim brought by Greece against the United Kingdom on behalf of a Greek shipowner, Nicolas Eustache Ambatielos. Ambatielos had purchased nine ships from the British government, but after a delay in delivery of the ships Ambatielos had experienced difficulties in making the agreed payments. When sued by the British government in English courts for the monies owed, Ambatielos brought a counterclaim arguing that there had been a verbal agreement regarding the dates of delivery of the ships, and that he was therefore owed compensation for losses suffered as a result of their late delivery.

---

130. *Ambatielos Claim (Greece v. U.K.),* 12 R.I.A.A. 83 (Comm’n Arb. 1956). The *Ambatielos* decision was not an ICJ decision or a decision of any other regularly constituted international tribunal, but rather the result of a state-state arbitration between the United Kingdom and Greece. *Id.* Nonetheless, the reasoning of the tribunal has proven persuasive to subsequent tribunals, and its holding has been uniformly adopted by international investment tribunals as reflecting a reality of the operation of MFN clauses. See, e.g., Siemens A.G. v. Argentine Republic, ICSID Case No. ARB/02/8, Decision on Jurisdiction, ¶¶ 100–02 (Aug. 3, 2004); Emilio Agustín Maffezini v. Kingdom of Spain, ICSID Case No. ARB/97/7, Award on Jurisdiction, ¶ 48–53 (Jan. 25, 2000); National Grid P.L.C. v. Argentine Republic, U.N. Comm’n on Int’l Trade Law [UNCITRAL], Decision on Jurisdiction, ¶¶ 83–89 (June 20, 2006), available at http://italaw.com/documents/NationalGrid-Jurisdiction-En.pdf.

131. It should be emphasized that the *Ambatielos* tribunal did not invent the *ejusdem generis* principle, which was already recognized as applicable to the operation of MFN clauses. See, e.g., Schwarzenberger, supra note 6, at 108 (“For practical purposes it is essential to bear in mind the exact scope of each particular m.f.n. clause; for m.f.n. treatment can only be claimed with respect to favours *ejusdem generis* granted by the promisor to third States.”). However, the tribunal’s use of the principle has come to be a standard reference for understanding its operation in international law.

133. *Id.* at 91. For excellent overviews of the facts behind the *Ambatielos* award and the reasoning of the award itself, see, for example, Kurt Lipstein, *The Ambatielos Case. Last Phase,* 6 INT’L & COMP. L.Q. 643 (1957); S.E.K. Hulme, *The Ambatielos Case,* 1 MELB. U. L. REV. 64 (1957); D.H.N. Johnson, *The Ambatielos Case,* 19 MOD. L. REV. 510 (1956).

135. *Id.* at 93–94, 100.
After losing at the level of the trial court, Ambatielos appealed to the
Court of Appeals, seeking to introduce new testimony from a British gov-
ernment official regarding the existence of the alleged verbal
agreement.'

In accordance with British procedural rules, the Court of Appeals excluded
this testimony, as it had not been presented at the original trial.' The court
subsequently held against Ambatielos.'

Ambatielos turned to the Greek government for assistance, and, after
decades of failed negotiations,' Greece attempted to bring the dispute be-
fore the ICJ.' The ICJ, however, held that it did not have jurisdiction over
the substance of the claim due to a preexisting arbitration clause, and that
Greece and the United Kingdom were obligated to proceed to arbitration.'

The existence of an MFN clause in a treaty between Greece and the
United Kingdom became a central issue in the arbitration when Greece at-
ttempted to invoke that clause in order to incorporate a promise made by the
United Kingdom in treaties with third states to treat nationals "in accord-
ance with 'justice,' 'right,' 'equity' and the 'principles of international
law.'"' According to Greece, the refusal by the Court of Appeals to admit
the testimony of the British government official regarding the agreed dates
of delivery constituted a violation of this standard.'

The United Kingdom's defense included the argument that an MFN
clause "can only attract matters belonging to the same category of subject as
the clause itself relates to," and that as the clause invoked by Greece applied
only to "matters relating to commerce and navigation," it could not be
applied to issues regarding what the United Kingdom termed "the
administration of justice."'

Adopting the ejusdem generis principle, the tribunal accepted the Unit-
ed Kingdom’s argument that an MFN clause only gives a right to more
favorable treatment that is given in those fields to which the MFN clause it-
self relates.' Consequently, in order for Greece to use the MFN clause to
incorporate the standard to which it had appealed, it was necessary that "the
administration of justice" be one of the "matters relating to commerce and

142. Ambatielos, 12 R.I.A.A. at 106.
143. Id. at 105-06.
144. Id. at 106 (quoting the Treaty of Commerce and Navigation, Gr. Brit.-Greece, art.
145. Id. at 106-07; see also Houde, supra note 6, at 127 ("The ejusdem generis princi-
ple provides that an MFN clause can attract the more favourable treatment available in other
treaties only in regard to the 'same subject matter,' the 'same category of matter,' or the
'same class of matter.' ")
navigation.” The tribunal held that it was indeed such a matter, but ultimately also held that the United Kingdom’s actions nonetheless did not constitute a violation of the principle in question.

The importance of the *Ambatielos* decision for the present discussion does not, however, relate to the final holding of the tribunal, but rather to its endorsement of the *ejusdem generis* principle. By recognizing the role of this principle as an essential element of the interpretation of MFN clauses, the tribunal placed a further important constraint on the operation of such clauses. That is, just as MFN clauses are only able to affect the terms of the treaty in which they are contained, so they are substantively circumscribed by the nature of that treaty. The mere ability of the beneficiary of an MFN clause to identify treatment received by a third state that would also benefit its activities, insofar as they are covered by the MFN clause, does not entail that it has a right to such treatment. MFN clauses are not a generalized means of ensuring market equality. So long as the market inequality arises as an incidental consequence of treatment delivered in an area of law other than the one covered by the MFN clause, the MFN clause has no effect.

Through these three cases, the ICJ and the *Ambatielos* tribunal went a significant way towards delineating the boundaries of the functioning of MFN clauses in public international law. However, while these boundaries are also applicable to MFN clauses in international investment law, the decisions in which they were recognized do not themselves address that field. As the following Part of the Article will argue, however, the nature of international investment law itself imposes significant additional boundaries on the operation of MFN clauses. Consequently, any understanding of the operation of MFN clauses in international investment agreements must attend to the specific nature of international investment law and cannot rely solely upon discussions of the functioning of MFN clauses in public international law generally.

147. Id. at 109–10.
148. This constraint can be seen as a development of the holding in the *Anglo-Iranian Oil Company* case. See supra Part III.A.
149. Contra Schill, supra note 9, at 502 (arguing that MFN clauses “ensure equal treatment between the State benefiting from MFN treatment and any third State”).
150. It should, however, be emphasized that the constraint placed by the *ejusdem generis* rule actually relates not to the subject matter of the treaty, but to that of the clause. However, where the clause itself provides no clear *ejusdem generis* limitation, the nature of the treaty in which it is contained can do so, as it provides the context in which the clause must be interpreted. Houde, supra note 6, at 142–43.
IV. THE NATURE OF MFN CLAUSES IN INTERNATIONAL INVESTMENT LAW

This Part of the Article argues that three important limitations must be recognized on the operation of MFN clauses in international investment law. First, it argues that MFN clauses in international investment agreements should generally be understood as granting access solely to more favorable treatment provided after the agreement is negotiated, and not to any preexisting more favorable treatment.\(^{152}\) Second, it argues that the "favorability" of a particular type of treatment should be evaluated not with respect to the specific investor invoking an MFN clause, but with respect to the entire class of investors covered by the clause. Finally, it argues that MFN clauses do not merely provide to the beneficiary any more favorable treatment provided to a third party, but also simultaneously exclude the beneficiary's access to the treatment originally promised. Moreover, these latter two limitations can sometimes combine in a way that results in an investor actually being harmed by an MFN clause rather than benefited by it.

A. The Instantaneous Effect of an MFN Clause

While no one would question that an MFN clause can have an impact on the rights and obligations included within a BIT, MFN clauses in international investment agreements must be understood as having an instantaneous effect, independent of any need for the beneficiary of the clause to invoke the clause's existence. That is, where State A and State B have signed a BIT containing an MFN clause, the instant State B gives more favorable treatment to State C than to State A, State A instantly becomes entitled to the higher level of treatment given to State C.\(^{153}\) Although the instantaneous effect of an MFN clause is not itself a boundary on the operation of MFN clauses in international investment law, it plays an essential role in the existence of those boundaries and hence must be addressed first.

That MFN clauses operate instantaneously is not in itself a controversial claim, as it is fully consistent both with the accepted approach adopted in public international law and in decisions by international investment arbitration tribunals.\(^{154}\) Simply because an MFN clause entails an obligation not to

\(^{152}\) The word "generally" is important here. As the discussion will show, there can be cases in which an MFN clause should be seen as applying to a specific example of preexisting treatment.

\(^{153}\) It should be emphasized that the effect of an MFN clause is only unidirectional. That is, since only State B has provided more favorable treatment to a third state, only the obligations of State B are altered. The obligations of State A remain unchanged.

\(^{154}\) See, e.g., Bayindir Insaat Turizm Ticaret Ve Sanayi A.S. v. Islamic Republic of Pakistan, ICSID Case No. ARB/03/29, Decision on Jurisdiction, ¶ 163–65 (Nov. 14, 2005) (allowing the claimant to claim damages for violation of a BIT provision incorporated via an MFN clause, even where the claimant invoked the third-state provision after commencement of proceedings); Douglas, supra note 20, at 108 (stating that "investment treaty tribunals have attempted to convert the fiction of automatic incorporation into a reality"); Houde, supra note 6, at 142 (referring to MFN clauses as "ingenious legal shorthand to treaty
provide more favorable treatment to a third party than is provided to the beneficiary of the MFN clause, the moment more favorable treatment is provided, the state providing the more favorable treatment is in breach of its treaty obligations.

There are, however, two ways in which an MFN clause could be understood as having an immediate effect that will be referred to here as the "right to claim" understanding and the "instantaneous obligation" understanding. The following Sections of the Article will detail these two approaches and will then argue that only the "instantaneous obligation" approach to MFN clauses is consistent with the nature of contemporary international investment law.

1. The "Right to Claim" Understanding of MFN Obligations

The first potential way of understanding the immediate effect of an MFN clause is that as soon as more favorable treatment is provided to a third party, the beneficiary of the MFN clause gains the "right to claim" equivalent treatment for itself. That is, no immediate obligation arises for the state providing the treatment to the third state to also provide it to the beneficiary of the MFN clause, but once the beneficiary requests equivalent treatment, it must be provided.\(^{155}\)

The "right to claim" understanding makes a significant degree of sense in the context of international agreements, as it maximizes the predictability and transparency of MFN obligations,\(^ {156}\) thereby minimizing the impact of such clauses on the policy-making freedom of states. After all, while there will be cases in which it is clear that treatment given to a third state is more favorable than that given to the beneficiary of the MFN clause, in many cases it will be disputable.\(^ {157}\) States attempting to act in such a situation will

---

155. The "right to claim" understanding of MFN obligations in international investment law has received recent support in academic commentary. See, e.g., Douglas, supra note 20, at 105 (arguing that an MFN clause has no effect until a claim is made under it and "does not, in truth, operate automatically to 'incorporate' provisions of a third treaty so that all that remains for a tribunal to do is to interpret the amended text of the basic treaty"). Unfortunately, Douglas consistently confuses the "instantaneous obligation" understanding of MFN clauses with the view that MFN clauses serve as a form of "incorporation by reference." Consequently his argument does not really address the justifications behind adopting the "instantaneous obligation" interpretation.

157. See, e.g., Asian Agric. Prods. Ltd. v. Sri Lanka, ICSID Case No. ARB/87/3, Final Award, ¶ 54 (June 27, 1990) (rejecting application of an MFN clause where it was unclear...
face pressure to be conservative in the obligations they undertake with third parties, out of concern that they may unwittingly also oblige themselves to provide the same treatment to any states with which they have an applicable MFN clause. By contrast, if the beneficiary is required to make a claim for the more favorable treatment before it is owed, the granting state is assured of knowing at all times precisely what its obligations are.

In addition, because no obligation to provide the more favorable treatment existed until the claim was made, there is no risk of large backdated damages claims, extending through years in which the state in good faith did not believe any obligation to provide the treatment in question existed.

However, the “right to claim” understanding is significantly less desirable for the beneficiary of the MFN clause than it is for the state providing the more favorable treatment. After all, since the beneficiary is required to claim any treatment before it has a right to receive it, the beneficiary will need constantly to monitor the treatment provided by the granting state to third states in order to ensure that it is not missing any benefit it should be receiving under the MFN clause.\footnote{158. It is worth emphasizing that since the “treatment” to which an MFN clause is applicable includes informal benefits provided by any level of government, rather than just benefits delivered via treaty, the current accessibility of information on treaty obligations does not mean that the monitoring costs involved would be relatively low.}

The “right to claim” understanding of MFN obligations, then, ultimately maximizes state policy-making freedom, but does so by minimizing the benefits MFN clauses provide, as it creates a significant risk that the beneficiary of an MFN clause will often not in fact be receiving the most favorable treatment given by the state with which it has an MFN agreement.

2. The “Instantaneous Obligation” Understanding of MFN Obligations

By contrast, the “instantaneous obligation” understanding of MFN clauses eliminates any necessity for the beneficiary of the MFN clause to monitor the actions of the state with which it has an MFN agreement. However, it also significantly increases the impact of an MFN clause on state policy-making freedom.

Under this approach, if State A and State B have entered into an MFN agreement, as soon as State B provides more favorable treatment to State C, it is obligated also to provide it to State A. State A need do nothing to gain this more favorable treatment, and in turn any claim it makes against State B for benefits it should have received under the MFN clause will be backdated to the moment the more favorable treatment was given to State C.

The “instantaneous obligation” understanding, then, emphasizes that states entering into an MFN agreement have done so voluntarily, and that the existence of such an agreement is simply inconsistent with allowing one
party to the agreement to violate it, so long as its counterparty remains unaware. 159

3. The Justification for the “Instantaneous Obligation” Understanding in International Investment Arbitration

Within the context of international investment arbitration there are clear justifications for adopting the “instantaneous obligation” understanding rather than the “right to claim” understanding. There is, for example, unambiguous international investment arbitration case law on this issue, and each tribunal that has addressed the question has adopted the “instantaneous obligation” understanding. 160

In addition to mere adherence to prior case law, however, additional substantive reasons exist to support the adoption of the “instantaneous obligation” understanding within investment arbitration, arising specifically from the incorporation of investors into the investment arbitration process.

By incorporating direct investor-state dispute resolution into a BIT, the parties to the BIT have thereby created a separation between the parties to the BIT and the parties to any dispute resolution procedure that may result from a violation of the BIT. Indeed, the existence of this distinction has traditionally served as a primary rationale for the adoption of investor-state arbitration, as it is argued that allowing an investor to bring its claim directly against the Host State serves to depoliticize the dispute by removing the Home State from the proceedings. 161

However, if the “right to claim” understanding were to be adopted in international investment arbitration, the Home State would be required to claim MFN treatment in order for its investors to receive it. The Home State would, therefore, be reintegrated back into the dispute resolution process in a way that would raise precisely the politicization concerns that initially served to motivate the adoption of investor-state arbitration. The “right to claim” understanding, then, is simply inconsistent with one of the primary rationales underlying the adoption of international investment arbitration.

159. For an interpretation of the operation of MFN clauses in accordance with the “instantaneous obligation” understanding, see Coutain, supra note 10, at 147.

160. See, e.g., MTD Equity Sdn. Bhd. & MTD Chile S.A. v. Republic of Chile, ICSID Case No. ARB/01/7, Award, ¶¶ 100–04, 197–206 (May 25, 2004), 44 I.L.M. 91 (2005) (applying an MFN clause to expand the meaning of “fair and equitable treatment” without requiring a claim by the claimant’s Home State); Bayindir Insaat Turizm Ticaret Ve Sanayi A.S. v. Islamic Republic of Pakistan, ICSID Case No. ARB/03/29, Decision on Jurisdiction (Nov. 14, 2005) (applying an MFN clause to incorporate a “fair and equitable treatment” obligation into a treaty without requiring a claim by the claimant’s Home State).

161. See, for example, the statement by Ibrahim Shihata, Secretary-General of ICSID from 1983 to 1998, that ICSID was created “to provide a forum for conflict resolution in a framework which carefully balances the interests and requirements of all the parties involved, and attempts in particular to ‘depoliticize’ the settlement of investment disputes,” Ibrahim Shihata, Towards a Greater Depoliticization of Investment Disputes: The Roles of ICSID and MIGA, 1 ICSID REV. FOREIGN INV. L.J. 1, 4 (1986).
It might be argued that due to the delegation of dispute resolution authority to investors, commencement of arbitral proceedings by an investor should be treated as a “claim” by the investor’s Home State to any more favorable treatment. However, there may clearly be situations in which a Home State does not wish allegedly more favorable treatment to be claimed. Of most immediate relevance, the Home State may not wish the MFN clause in a BIT to be applied to dispute resolution clauses, as it has itself agreed to more favorable dispute resolution procedures with third states than exist under the BIT including the MFN clause. It does not therefore want investors from the state counterparty to the MFN agreement to be able to access those procedures.

It is, to be blunt, simply implausible to think that merely through the incorporation of direct investor-state arbitration into a BIT, the states party to that BIT intended to give investors the power effectively to rewrite the terms of a carefully negotiated treaty. The commencement of an arbitration by an investor, then, simply cannot be regarded as a “claim” by its Home State of any more favorable treatment currently offered by the Host State to third states.

Under the “right to claim” approach, then, no tribunal could decide in favor of an investor with respect to an MFN clause unless the Home State had explicitly supported the investor’s MFN argument. Yet such a requirement is not only clearly inconsistent with the desire to depoliticize investment disputes, it is also inconsistent with the delegation of dispute resolution to the investor, as it subjects a significant portion of the investor’s argument to an effective veto by the Home State.

The very structure of international investment arbitration, then, with its incorporation of direct investor-state arbitration, requires that MFN clauses in international investment agreements be interpreted in accordance with the “instantaneous obligation” understanding, as a result of which any more favorable treatment delivered by State B to State C is instantly owed to State A, without requiring any form of claim to the treatment to be made by State A. The following Section demonstrates how this aspect of MFN clauses in international investment law creates an important boundary for their functioning in this field that does not apply to MFN clauses in public international law generally.

B. The Predominantly Forward-Looking Nature of MFN Clauses in International Investment Arbitration

The preceding Section addressed one element of what can be called the “temporality” of MFN clauses, or the way in which they are fundamentally enmeshed in considerations regarding time. As seen in that discussion, MFN clauses in international investment arbitration must be understood as having their effect the instant more favorable treatment is provided to a third state. This Section of the Article demonstrates the impact of this instantaneous effect on the applicability of MFN clauses to more favorable treatment already
existing when the MFN clause came into effect. Specifically, it will be argued that an MFN clause in an investment treaty should not usually be understood as giving the beneficiary of the clause access to more favorable treatment in a preexisting third-party treaty, although it can give access to preexisting nontreaty treatment. This is a particularly important limitation on the operation of MFN clauses in international investment law, as there has traditionally been no controversy regarding the applicability of MFN clauses to preexisting treatment.\textsuperscript{162}

1. The Role of Intent in Interpreting MFN Clauses in Investment Treaties

The approach to MFN clauses advanced in this Article relies heavily upon arguments regarding what can plausibly be said to have been intended by the states party to a BIT when they decide to incorporate an MFN clause into their treaty. There is, however, a significant difference of opinion amongst legal commentators regarding the relevance to treaty interpretation of the subjective intentions of the Contracting States. This Subsection therefore lays out the justification for appealing to party intent in interpreting MFN clauses.

Although it is uncontested that Articles 31 and 32 of the Vienna Convention on the Law of Treaties (VCLT)\textsuperscript{163} are the touchstone for interpretation of any BIT,\textsuperscript{164} there is still significant disagreement among commentators regarding their precise meaning. While few, if any, commentators would deny that the VCLT gives primacy to the text of a treaty over any textually unexpressed intentions of the contracting states, disagreement exists regarding how strong this preference for “text” over “intention” actually is. Most controversially, commentators are split regarding whether clear evidence that the text as adopted does not accurately reflect the intentions of

\textsuperscript{162} Indeed, in the early twentieth century the controversy concerned whether MFN clauses applied to future treatment, not preexisting treatment. Comm. of Experts, supra note 30, at 140 (“Whether or not the clause applies to future as well as to past favours is much discussed by writers, although no actual case has been found in which the question was raised.”); Thomas Barclay, \textit{Effect of `Most-Favored-Nation' Clause in Commercial Treaties}, 17 \textit{Yale L.J.} 26, 31 (1907) (noting the view of a prominent French commentator that an MFN clause “must be considered as implying everything that existed at the moment when signed, but that it could not be considered to extend to anything later in date”).

\textsuperscript{163} Vienna Convention on the Law of Treaties arts. 31–32, \textit{opened for signature May 23, 1969, 1155 U.N.T.S. 331} [hereinafter VCLT] (setting forth the rules of treaty interpretation, including the basic rule that a treaty must be interpreted according to the “ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose”).

\textsuperscript{164} See, \textit{e.g.}, \textsc{Jan Peter Sasse, An Economic Analysis of Bilateral Investment Treaties} 47 (2011) (“Starting point for most tribunals is Article 31 of the Vienna Convention on the Law of Treaties.”); Schill, \textit{supra} note 13, at 205–06 (criticizing the interpretation of MFN clauses in accordance with the intentions of the contracting parties as inconsistent with the VCLT).
the contracting states should suffice to overrule otherwise clear treaty language, or if states must instead simply live with the agreements they sign.\textsuperscript{165}

The source of this disagreement lies in the language adopted in Articles 31 and 32 of the VCLT. It is unquestionably true that Article 31 of the VCLT gives primacy to the text of the treaty, rather than to the subjective intentions of the parties, adopting as its fundamental rule that treaties be interpreted "in accordance to the terms of the treaty in their context and in light of its object and purpose."\textsuperscript{166} While this rule is admittedly framed in a way that gives recognition to the intentions of the parties, requiring interpretation in accordance with the "object and purpose" of the treaty, this recognition applies solely with respect to interpretation of the written language. Consequently, it cannot justify giving any reading to a clause not directly based upon the actual language of the treaty.

The complication arises, however, when proper consideration is given to Article 32 of the VCLT, regarding the use of "supplementary means of interpretation," such as "the preparatory work of the treaty."\textsuperscript{167} Article 32 lays out a two-step process in which an interpretation is initially developed under Article 31, but is then tested against supplementary means of interpretation to either "confirm" the interpretation arrived at under Article 31 or to derive a different interpretation where the interpretation arrived at under Article 31 left the treaty language either "ambiguous or obscure" or "manifestly absurd or unreasonable."\textsuperscript{168}

It is the recognition in Article 32 that supplementary means of interpretation can be used to "confirm" an interpretation reached under Article 31 that creates the difficulty for a purely textualist interpretation of the VCLT, as this option is listed separately to situations in which the treaty language remains "ambiguous" or "absurd."\textsuperscript{169} That is, it is not first necessary for the interpretation reached via Article 31 to be clearly flawed in some way for supplementary means of interpretation be used to "confirm" its correctness.

There is, however, little point in confirming the correctness of an interpretation if that interpretation cannot be rejected when shown to be wrong. It must, therefore, be the case, as recognized by commentators such as Stephen Schwebel, former President of the ICJ, that clear evidence of the intentions of contracting states can override even apparently clear treaty language.\textsuperscript{170}

\begin{itemize}
  \item \textsuperscript{165} In support of a broad interpretation, see, for instance, Emmanuel Gaillard, \textit{International Arbitration Law: Establishing Jurisdiction Through a Most-Favored-Nation Clause}, 233 N.Y. L.J. 1, 3 (2005). In support of a narrow interpretation, see, for instance, Vesel, supra note 17, at 175.
  \item \textsuperscript{166} VCLT, supra note 163, art. 31.
  \item \textsuperscript{167} Id. art. 32.
  \item \textsuperscript{168} Id.
  \item \textsuperscript{169} Id.
  \item \textsuperscript{170} Stephen M. Schwebel, \textit{May Preparatory Work Be Used to Correct Rather than Confirm the 'Clear' Meaning of a Treaty Provision?}, in \textit{Theory of International Law at the Threshold of the 21st Century} 541, 546 (Jerzy Makarczyk ed., 1996); see also An-
Even on this understanding of the VCLT, of course, the text retains its centrality in interpretation. Otherwise Article 31’s emphasis on the text would be nonsensical. However, this emphasis on the text can be understood as simply requiring a high level of certainty regarding the subjective intentions of the parties to the treaty if apparently clear language is to be overridden. That is, clear treaty language overrides vague indications of contrary party intent, but where party intent is sufficiently clear, even apparently clear treaty language must give way to it.

The subjective intentions of the states party to a BIT are, therefore, always important in the interpretation of the provisions of the BIT, including an MFN clause, even though they remain subsidiary to the language of the BIT itself.

2. Party Intent as to the Extension of MFN Clauses to Already-Existing More Favorable Treatment

Once it has been accepted, however, that party intent can correct even otherwise clear treaty language, an important conclusion can be drawn regarding the operation of MFN clauses. Specifically, it will be argued in this Subsection of the Article that parties usually cannot plausibly be understood to have intended an MFN clause in an investment treaty to grant the beneficiary of the clause access to more favorable provisions present in other investment treaties already in effect when the Basic Treaty came into force. Consequently, even where the text of the MFN clause would itself seem to allow such an application, the clear intent of the parties should be taken to override the language of the clause.

The justification for this preclusion of already-existing treaty provisions from coverage by an MFN clause in a BIT derives directly from the instantaneous obligations that arise as a result of such clauses, as discussed above. To illustrate with an example, presume that in 1995 States A and B sign an investment treaty including an MFN clause, as well as including a fair and equitable treatment clause restricted in certain ways. However, States B and C had already signed, in 1992, an investment treaty containing an

---

172. On the meaning of “fair and equitable treatment” in international investment law, see Christoph Schreuer, Fair and Equitable Treatment in Arbitral Practice, 6 J. World Invest. Trade 357, 357 (2005).
unrestricted fair and equitable treatment clause. If the MFN clause in the A-B treaty is understood as applying to treaty provisions already in existence when the A-B treaty comes into force, then investors from State A are actually covered by an unrestricted fair and equitable treatment clause, despite the restrictions explicitly incorporated into the A-B treaty.

The implausibility that parties to the treaty intended this situation derives not from the fact that the parties to the A-B BIT are receiving treatment other than that promised them in the BIT, as that is an inherent consequence of the operation of an MFN clause. Rather, the implausibility results because, due to the instantaneous effect of MFN clauses, the removal of the restrictions on the fair and equitable treatment obligation included in the A-B treaty occurred the instant the A-B treaty came into force. That is, there was no point at which the fair and equitable treatment clause expressly negotiated between States A and B was actually in effect between them. Such a situation, however, simply makes incomprehensible the inclusion of the restrictions in question within the treaty.\(^{173}\)

Nevertheless, as established above, sufficiently strong evidence of party intent can suffice to override otherwise clear treaty language.\(^{174}\) Consequently, the sheer implausibility that States A and B negotiated treaty language that would have absolutely no effect might justify precluding the application of the MFN clause in the A-B treaty to the fair and equitable treatment clause in the B-C treaty. That is, although the language of the MFN clause itself is unrestricted, an exception is read into the clause that prevents it being applied to any more favorable treaty provisions already in effect at the time the A-B treaty came into force.

The difficulty with such an argument is that, as noted in the historical survey earlier in the Article, MFN clauses have traditionally been recognized as applying to already-existing treatment.\(^{175}\) Indeed, it has been argued that one of the primary purposes of an MFN clause is to reassure treaty negotiators that they have secured the best available treatment for their state,

\[^ {173}\] Notably, just prior to this Article going to print, this argument, which has been unsuccessfully advocated by the Author since early 2010, was accepted for the first time by a tribunal. See ICS Inspection and Control Services Ltd. (U.K.) v. Republic of Argentina, UNCITRAL, PCA Case No. 2010-9, Award on Jurisdiction, ¶ 317 (Feb. 10, 2012), available at http://italaw.com/documents/ICS_v_Argentina_AwardJurisdiction_10Feb2012_E.pdf (rejecting application of an MFN clause to dispute resolution provisions as “the 18-month litigation prerequisite would have been void ab initio—immediately superseded by means of the treaties’ MFN clauses”). Unfortunately, the tribunal failed to address the complexities discussed in the remainder of this Section, relying instead simply on the presumed understanding of the extent of the MFN clause on the part of one state party to the BIT. Such an approach, though, is inconsistent with basic rules of treaty interpretation, in which the subjective understanding of a single party cannot determine the meaning of a treaty provision. See, e.g., ULF LINDERFALK, ON THE INTERPRETATION OF TREATIES 205 (2007) (“[T]he object and purpose of a treaty can hardly be anything other than the object and purpose, which the parties to the treaty intended it to have—or rather, more specifically, mutually intended it to have.”).

\[^ {174}\] See supra Part IV.B.1.

\[^ {175}\] See supra Part I.
rather than leaving them with the burden of discovering every form of treatment the counterparty to the treaty is providing to third states.^{176}

It is at this point that the distinctively public nature of investment treaties becomes important. Unlike most treaties, investment treaties are expressly designed to be broadly publicized. After all, states enter into investment treaties as a means of attracting private investment from abroad.^{177} The entire purpose of such a treaty, then, would be undermined were it to be kept secret, or even just not made broadly available. As a result, information on the investment treaties signed by states is easily available, even to the extent of being collected on publicly accessible websites.^{178}

The consequence of this public nature of investment treaties for the interpretation of MFN clauses is that it is simply implausible that states incorporated an MFN clause into their treaty as a protection against unknown already-existing BIT-based treatment. The information on such treatment is simply too easily accessible.^{179} To return to the example above, if unrestricted fair and equitable treatment had been discussed in the negotiations between States A and B, State B could have insisted that State A grant some countervailing benefit. However, if it is subsequently incorporated via an MFN clause, no compensation is given, and State B has effectively granted unrestricted fair and equitable treatment for free. Absent evidence to the contrary, then, it is simply implausible to read an MFN clause in a BIT as referring to already-existing provisions in a third-state BIT.

The precise nature of the position being maintained here should be emphasized. It is not being argued that the MFN clause in the A-B BIT should be understood as including an exception specifically precluding its applicability to the already-existing B-C BIT. Rather, the exception in question is a generalized one, referring to any preexisting BIT-based treatment. It does not require that the parties have identified the BITs in question in any way.

It is important to note, however, that since this argument is premised upon the publicity attached to BITs, it will be far less applicable to non-treaty-based treatment or to treaties that have not received significant publicity. Where the treatment granted to a third state constitutes, for example, an administrative practice, any tribunal addressing the applicability of

---

176. Schwarzenberger, supra note 6, at 99 ("It is clear the m.f.n. clauses serve as an insurance against incompetent draftsmanship and lack of imagination on the part of those who are responsible for the conclusion of international treaties.").

178. See, e.g., Investment Instruments Online, supra note 83.

179. Importantly, though, this rationale only applies to BIT-based treatment, as information on other types of treatment of investors may be less easily accessed. See supra note 158 and accompanying text.
an MFN clause must undertake an analysis of the accessibility to the contracting states of information on the practice. Only if the availability of information on the practice reaches a level corresponding to the publicity attached to BITs will the current argument be applicable.  

Nonetheless, as argued above, using the intentions of the parties to override otherwise clear treaty language is only appropriate when those intentions can be clearly ascertained, and it might be argued that the mere implausibility that states would knowingly agree to an MFN clause that automatically deleted negotiated treaty language does not rise to the level of certainty required by the VCLT. After all, it is certainly possible that the individuals negotiating the treaty simply adopted the general MFN clause without a full awareness of its effects. In such a situation, however, there would be no intent to exclude preexisting BIT provisions.  

The following Subsection of the Article offers an alternative argument that requires consideration of available evidence, rather than merely invoking a presumption. These two arguments have different impacts on the interpretation of MFN clauses, but both would suffice to preclude the application of MFN clauses to already-existing more favorable BIT provisions in at least some situations.  

3. Interpretation of MFN Clauses and the Interconnectedness of Treaty Rights  

While the argument advanced in the preceding Subsection would justify a blanket exclusion of preexisting BIT provisions from the application of MFN clauses, it is also possible to make an argument for a more limited exclusion, but one that is based on a stronger evidential foundation. As a result, even if the blanket exclusion argued for above is rejected, a more limited exclusion might still be applicable.  

The argument for this more limited exclusion centers on interpretation of the term “treatment” as used in an MFN clause. MFN clauses, after all, are a promise that no more favorable “treatment” will be given to investors from any third state than is given to investors from the beneficiary state. What constitutes “treatment” under an MFN clause, however, is never specified, and hence must be determined by each tribunal that is faced with an MFN-based argument.  

The standard approach to evaluating an MFN-based argument involves comparing the specific treaty provisions invoked by the investor. That is, if the investor is attempting to use the MFN clause in the Basic Treaty to alter that treaty’s dispute resolution provisions, a conventional analysis would involve comparing those provisions with the dispute resolution provisions in

---

180. The knowledge need only be attributed to the beneficiary, not to those who negotiated the treaty on its behalf.

181. See, e.g., MTD Equity Sdn. Bhd. & MTD Chile S.A. v. Chile, ICSID Case No. ARB/01/7, Final Award (May 25, 2004) (comparing the relevant provisions of the applicable Malaysia-Chile BIT with those of the Denmark-Chile and Croatia-Chile BITs).
the third-state treaty. If the latter are judged to be more favorable, then the MFN clause is held to be applicable.

Such an approach relies upon a contention that each treaty provision in a treaty constitutes an identifiable form of treatment, independent of the other clauses in the treaty. Without such a premise, a one-to-one comparison of treaty provisions could not suffice to show that investors under the third-state treaty are receiving more favorable “treatment” than investors under the Basic Treaty. Of course, the alternative of viewing the “treatment” received by an investor as constituting every provision of the applicable treaty, acting together, is itself unworkable, as it would make any meaningful comparison impossible. Consequently, inclusion of an MFN clause would be nonsensical, as it could never be successfully invoked.

A third approach serves as the foundation for the argument to be presented in this Subsection. This approach emphasizes that treaty negotiation is not a clause-by-clause matter, with each provision being agreed before another is addressed. Rather, treaty negotiation is fundamentally a more interrelated enterprise, with substantively unconnected elements of the treaty often being used as trade-offs: one party getting its preferred language in the first clause in exchange for the other party getting its preferred language in the second clause.\textsuperscript{182}

Because of this interconnectedness of treaty negotiation, an agreement between State A and State B to include, for example, restrictions on access to investor-state arbitration in the A-B BIT, need not reflect an unwillingness of one of the states to grant unrestricted access to investor-state arbitration. For example, it may simply be that what State B requested from State A in exchange for unrestricted access to investor-state arbitration was something State A was unwilling to give. That is, the existence of the restriction might represent a failure of negotiation rather than an agreed level of treatment.

This does not mean that there is no identifiable “treatment” of investors that was agreed between A and B. Rather, it means that the “treatment” consists of a combination of the restricted dispute resolution procedure included in the treaty, and the provision(s) with which it was connected during negotiations. The dispute resolution procedure, that is, was agreed as part of a broader package, and it is this broader package that constitutes the “treatment” of the investor from the perspective of an MFN clause.\textsuperscript{183}

\textsuperscript{182.} Jeswald W. Salacuse, Towards a Global Treaty on Foreign Investment: The Search for a Grand Bargain, in 19 Arbitrating Foreign Investment Disputes 51, 87 (Norbert Horn ed., 2004) ("[F]rom the point of view of negotiation theory, the more issues that can be addressed in a multilateral negotiation the more trade-offs that the parties can devise. And the greater possible trade-offs that negotiating parties have, the more likely they are to find a basis for agreement.").

\textsuperscript{183.} That is, the package constituting only those provisions with which the dispute resolution provided was connected during negotiations, rather than the broader “package” constituted by the entire treaty.
Of course there will rarely be information available to a tribunal as to which aspects of the treaty were connected in this way during negotiations. Consequently, it might seem that this broader conception of “treatment” is of no use to a tribunal faced with an MFN-based argument. However, it is unnecessary for a tribunal actually to identify which treaty provisions were used as trade-offs against one another. Rather, all the tribunal must do is find adequate evidence that such a trade-off took place.

For example, the tribunal may note that in the B-C BIT, entered into prior to the A-B BIT, State B was willing to agree to unrestricted investor-state dispute resolution. Absent evidence of a change in policy by State B between negotiation of the two BITs, it is then reasonable to conclude that State B was willing to agree to unrestricted investor-state arbitration in the A-B BIT. Similarly, the tribunal may find that there is no evidence that State A was unwilling to agree to unrestricted investor-state arbitration. As a result, a rebuttable presumption must arise that unrestricted investor-state arbitration was an option during negotiations for the A-B BIT, but that restrictions were imposed anyway.

The tribunal need simply conclude that since both parties were willing to agree to unrestricted investor-state arbitration, but nonetheless ultimately imposed restrictions, the most plausible explanation is that the dispute resolution provisions were not negotiated independently, but were instead linked to another provision or provisions during negotiations. The limitations on dispute resolution were part of a broader package of treatment, in which those limitations were imposed as a result of a failure to agree to alternative terms on one or more other provisions.

Nonetheless, whatever other provisions were included in this broader “treatment,” the available evidence indicates that unrestricted dispute resolution was expressly rejected by the parties. As argued in the previous Subsection, though, if the MFN clause in the A-B BIT is interpreted as applying to provisions in the preexisting B-C BIT, the restrictions on dispute resolution in the A-B BIT will never come into force. Consequently, given that information on the B-C BIT was easily accessible to both states, it would have made no sense for States A and B to agree on limited investor-state arbitration as part of a broader package of “treatment,” only to have those limitations removed as soon as the A-B BIT came into effect. This would involve giving away for free something for which a price was clearly being asked during negotiations.

This second argument, therefore, also justifies interpreting the MFN clause in the A-B BIT as not applying to the dispute resolution provisions of the B-C BIT. However, it does so in a more limited fashion than the first argument. That is, while a conclusion derived from this second argument has the benefit of being based on evidence, rather than on a mere presumption, it is also limited in that if the evidence is not sufficient, the argument fails. There might be, for example, evidence that at the time the A-B BIT was negotiated, State A had a policy opposing unrestricted investor-state arbitration. In such a situation, an alternative explanation for the incorpora-
tion of restricted investor-state arbitration into the BIT exists, and it is unnecessary to appeal to negotiation trade-offs. As a result, there would be inadequate justification for interpreting the MFN clause in the A-B BIT as not applying to the dispute resolution provisions of the B-C BIT.

It is also important, however, to emphasize precisely what is precluded by this argument, as it differs from what is precluded by the first argument. The first argument resulted in a blanket exception of the application of the MFN clause to all preexisting BIT provisions. The exception created by this second argument, on the other hand, relates not to preexisting BIT provisions, but to a particular type of provision. That is, it is based on a conclusion by the tribunal that the parties most probably considered and rejected unrestricted investor-state arbitration. As a result, it is the substantive agreement to unrestricted investor-state arbitration that is excluded from the application of the MFN clause, not mere appeal to the B-C BIT. The following Subsection addresses the importance of this distinction between the two arguments.

4. MFN Clauses and Subsequent Adoptions of Already-Existing More Favorable Treatment

The preceding two Subsections have offered two approaches to the issue of the application of MFN clauses to treatment of a third state already in existence at the time the treaty containing the MFN clause comes into effect. As will be demonstrated, however, these two arguments have significantly different effects on the impact of the subsequent adoption by a state of already-existing more favorable treatment.

Even if it is determined, for example, that investors from State A should not receive the unrestricted access to investor-state arbitration already available to investors from State C when the A-B BIT came into effect, State B may nonetheless subsequently negotiate a further BIT with State D that also includes unrestricted access to investor-state arbitration. The question this raises is whether investors from State A could then gain unrestricted access to investor-state arbitration through the B-D treaty, even though they were precluded from doing so through the B-C treaty.

The difference in this context between the two arguments offered above arises from the rationales on which each argument is based. The first argument is based upon a determination that the MFN clause in the A-B BIT must be understood not to refer to already-existing third-state BIT provisions, due to the implausibility that the parties would have adopted a treaty provision with the knowledge that it would have absolutely no effect.

Yet a subsequent adoption by State B of precisely the same treatment with respect to State D would not have the effect of making the original negotiation of the language in the A-B BIT pointless. After all, had the B-C treaty never existed, there would be no question that the MFN clause in the A-B BIT would be applicable to the terms of the B-D BIT. A tribunal that adopted the first argument in refusing to apply the MFN clause in the A-B
BIT to give investors from State A the unrestricted access to investor-state arbitration included in the B-C treaty would nonetheless remain perfectly free to grant that access via the B-D treaty.

By contrast, the second argument, focusing upon the interconnectedness of treaty negotiation, ultimately relies upon a conclusion that the states party to the BIT containing the MFN clause had considered and rejected a particular type of provision. As a result, a tribunal adopting this second argument as a ground for rejecting the applicability of the MFN clause in the A-B BIT to the dispute resolution procedures in the B-C BIT does so on the ground that the MFN clause in the A-B BIT simply cannot be a means of incorporating unrestricted investor-state arbitration into the A-B BIT. The subsequent adoption of precisely the same substantive treatment in the B-D treaty, therefore, would fail by precisely the same argument.\textsuperscript{184}

Ultimately, then, while both of the arguments advanced here provide a justification for holding MFN clauses to be inapplicable to at least some types of preexisting treatment, they are nonetheless importantly different, and significantly different impacts will result from a tribunal’s adoption of one of the arguments rather than the other.

C. Nonstate Beneficiaries of MFN Clauses in BITs as Classes, Not Individual Claimants

The preceding Sections of the Article have addressed potential exclusions of the applicability of MFN clauses to substantive treaty promises, but no analysis has as yet been made regarding the nature of the beneficiaries of an MFN clause. While for most noninvestment treaties this question may have an obvious answer, it is a more complex issue in the international investment law context, as MFN clauses in BITs do not generally refer to the contracting states but to their “investors.”\textsuperscript{185}

In response to this situation, it might be argued that MFN-based claims should be approached as though they require that any evaluation of the “favorability” of treatment be done with reference to the particular individual bringing the claim. The claimant, after all, is the “investor,” and hence presumably the subject of the reference in the MFN clause. The goal of this Section of the Article is to demonstrate that this approach is mistaken, and that evaluations of the favorability of treatment must be made with respect to the class of investors from which the claimant in an arbitration has come, rather than with respect to the claimant itself.

\textsuperscript{184} Of course, this argument only applies to subsequent adoptions of already-existing treatment, and the MFN clause would remain fully applicable to all subsequently adopted treaty provisions that did not mirror already-existing treatment.

\textsuperscript{185} An MFN clause may refer to “investments” rather than “investors,” or indeed may refer to both. However, to simplify the explanation being made here, only “investors” will be used. Nonetheless, precisely the same argument as made in this Section with respect to investors can be made with respect to investments.
The initial indication that it is the class of investors from which the claimant in an arbitration comes that is the beneficiary of an MFN clause in a BIT comes simply from the language adopted in such a clause. The claimant, after all, is not only not a signatory to the BIT, but is also nowhere referenced in it. That is, rather than including a promise that MFN treatment will be provided to this specific investor, the BIT will include merely a generalized reference to “investors,” a class to which this particular investor belongs. It might nonetheless be argued that although the collective term “investors” is used, it is used as a means of referring individually to each member of the class, rather than referring collectively to the class as a whole. In the same manner, someone who says “I fed my children dinner” is not saying that he somehow gave food to an abstract class of children, of which his individual children happen to be members. Rather, the clear meaning is that he provided food individually to each of his children. If the collective reference to “investors” in a BIT is understood as also operating in this individualized manner, then the relevant reference for the evaluation of favorability would remain the claimant investor, rather than the broader class from which it came.

However, the “instantaneous obligation” understanding of MFN clauses in investment treaties simply makes such an individualized interpretation of the term “investor” unworkable. Presume, for example, that in 1990 State A and State B entered into a BIT that includes an MFN clause. Then, in 1995, State B entered into a BIT with State C that includes a more favorable fair and equitable treatment provision than the one included in the A-B BIT. As a result of the instantaneous effect of MFN clauses, that more favorable fair and equitable treatment provision is incorporated into the A-B BIT in 1995, as soon as the B-C BIT comes into force.

Importantly, however, some investors from State A will not even have invested in State B as of 1995. In addition, few of those who have invested prior to 1995 will have a claim against State B as of that date. As a result, no facts about investors from State A, their investments, or the bases of their claims can be relevant to determining whether the treatment provided to investors from State C is indeed more favorable than that provided to investors from State A. The information is simply not there to be considered.

Only an evaluation of favorability with respect to investors from State A as a class can possibly support a conclusion that the broader fair and equitable treatment provision included in the B-C BIT was also applicable to investors from State A as of 1995. This is precisely the conclusion mandated by the instantaneous effect of MFN clauses.

The consequence of this is that the proper evaluation to be undertaken by a tribunal addressing an MFN-based claim is not whether the treatment claimed by the investor would be more favorable to the specific investor bringing the claim. It must, rather, be whether the treatment in question

---

186. See supra Parts IV.A.1-2.
would be more favorable to investors from the claimant’s Home State as a class.

As the following Section argues, however, moving the focus of a favorability evaluation from the claimant to the class of investors from which the claimant comes can cause an enormous change in the impact an MFN clause has on an investor. Indeed, it can have the consequence that an MFN clause will actually harm a claimant, rather than benefit it.187

D. The “Exclusionary Effect” of an MFN Clause

That MFN clauses only serve to provide “more favorable” treatment to investors might be taken to imply that there is no circumstance in which a respondent state in an arbitration would be able to invoke an MFN clause as a defense against an investor’s claims. After all, if the application of an MFN clause to a particular type of third-state treatment would harm an investor, that treatment would hardly be “more favorable” for it. However, as the preceding Section argued, this view is fundamentally flawed, as it bases the evaluation of the favorability of third-state treatment on the individual claimant in an arbitration, rather than on the class from which the claimant comes. This Section of the Article demonstrates that MFN clauses can in fact harm an investor and hence can indeed be used by respondent states as a defense against an investor’s claims.

Presume that in 1990 State A and State B signed a BIT that includes an MFN clause, as well as a consent to investor-state arbitration restricted to claims for expropriation. Subsequently, in 1995, State B signed a BIT with State C that includes a consent to investor-state arbitration for a wide variety of claims, but not including expropriation. Presuming that this latter consent is indeed more favorable than the narrower consent in the A-B BIT, the instantaneous effect of MFN clauses means that as of 1995 the broader consent to arbitration in the B-C BIT is incorporated into the A-B BIT.

It is important to note that the MFN clause in the A-B BIT only constitutes a promise that investors from third states will not be treated better than investors from State A. As discussed in the historical survey at the beginning of the Article, MFN clauses are a means of providing equality with competitors, not superiority.188 The MFN clause in the A-B BIT only provides investors from State A with treatment equal to that received by investors from State C. It cannot provide them with better treatment.

Investors from State C, however, cannot bring expropriation claims to investor-state arbitration, as such claims are not covered by the consent to arbitration in the B-C BIT. Consequently, were investors from State A able to retain their right to bring expropriation claims, while also gaining the

187. The MFN clause may, for example, serve to preclude an investor’s claim, if the investor is uncharacteristic of investors from its Home State, and the MFN clause has altered the terms of the Basic Treaty in a way that will benefit that larger class of investors.

188. See supra notes 48, 129, and accompanying text.
right to bring claims under the terms of the B-C BIT, they would actually be receiving better treatment than investors from State C.

It must be, therefore, that as soon as investors from State A gain the ability to bring claims under the consent to arbitration in the B-C treaty, they simultaneously lose the right to bring claims under the consent to arbitration in the A-B treaty. That is, MFN clauses incorporate more favorable treatment given to third parties, but in so doing exclude the treatment originally promised in the treaty in which they are contained. This element of the operation of MFN clauses is what is here called the exclusionary effect of an MFN clause.

This may initially appear to be a minor point, given that the MFN clause will only incorporate treatment given to third parties where that treatment is more favorable to the beneficiary of the clause. However, as was made clear in the previous Section, the proper standard for determining whether an MFN clause incorporates treatment into the BIT in which it is contained is not whether the treatment in question would be more favorable to the investor bringing the arbitration, but whether it would be more favorable to the class referred to in the MFN clause, such as investors from State A.

To return to the example, it would presumably be more favorable to investors from State A as a class to have access to a broad dispute resolution provision, even one that does not include expropriation. There is, after all, no way of knowing in advance the specific grounds on which investors may need to bring a claim. Consequently, the broader consent to investor-state arbitration in the B-C BIT will replace the narrower consent originally included in the A-B BIT through the operation of the MFN clause.

This will have the effect, however, of preventing any investor from State A from bringing to arbitration a claim of expropriation. The effect of the MFN clause in the A-B BIT will, therefore, by no means be “more favorable” to investors whose only claim is one of expropriation, as they will lose their ability to bring any claim at all.

The exclusionary effect of an MFN clause, then, once understood in the context of the class-based nature of MFN beneficiaries under BITs, can actually serve to make MFN clauses harmful to specific investors. In turn, it can give respondent states a reason to invoke MFN clauses as a defense to an investor’s claim, in opposition to the traditional view that they are merely a mechanism to be used by investors.

**CONCLUSION**

MFN clauses have gained their current importance in international investment law primarily because of the interaction between such clauses and investor-state arbitration. Nonetheless, international investment arbitration tribunals have done little to explicate the operation of MFN clauses in the international investment context, focusing instead on the perceived teleological nature of such clauses. The goal of this Article has been to demonstrate
that this teleological nondiscrimination approach to the interpretation of MFN clauses both is inconsistent with the historical development of MFN clauses and fails to recognize certain limitations on MFN clauses that follow necessarily from their incorporation into international investment agreements.

An analysis of the boundaries of MFN clauses in international investment law is not worth pursuing solely for academic curiosity. A full understanding of MFN clauses makes clear that they are enormously powerful instruments that can impede significantly a state’s otherwise legitimate regulatory activities. Nonetheless, despite the power of MFN clauses, they are almost routinely incorporated into contemporary BITs, as though they constitute little more than a political statement of friendship with no legal consequences. The hope underlying this Article is that once the operation of MFN clauses in international investment agreements is more clearly understood, they will be used more circumspectly.
